Preface

This manual is one of a series that describes a capabilities-based Opposing Force (OPFOR) for training US Army commanders, staffs, and units. The manuals in this series are-

- FM 100-60. Armor- and Mechanized-Based Opposing Force: Organization Guide.
- FM 100-61. Armor- and Mechanized-Based Opposing Force: Operational Art.
- FM 100-62. Armor- and Mechanized-Based Opposing Force: Tactics.
- FM 100-63. Infantry-Based Opposing Force: Organization Guide.
- FM 100-64. Infantry-Based Opposing Force: Operations and Tactics.
- FM 100-65. Opposing Force Equipment Guide.
- FM 100-66. Opposing Force in Operations Other Than War.

Together, these manuals outline an OPFOR that can cover the entire spectrum of military capabilities against which the Army must train to ensure success in any future conflict.

Applications of this series of manuals include field training, training simulations, and classroom instruction throughout the Army. All Army training venues should use an OPFOR based on these manuals, except when mission rehearsal or contingency training requires maximum fidelity to a specific country-based threat. Even in the latter case, trainers should use appropriate parts of this capabilities-based OPFOR to fill information gaps in a manner consistent with what they do know about a specific threat.

This manual provides a menu of possible organizational building blocks for an infantry-based OPFOR, From this menu, users can build an order of battle appropriate to their training requirements. For each type of unit, the manual outlines basic unit structure and possibly a number of variations. For most units, the manual also lists principal items of equipment. Appendixes provide guidance and examples for users who wish to substitute other items of equipment for the baseline systems listed for a unit.

The proponent for this publication is HQ TRADOC, Send comments and recommendations on DA Form 2028 directly to the Threat Support Directorate of the TRADOC Office of Deputy Chief of Staff for Intelligence at the following address: Director, Threat Support Directorate, ATTN: ATIN-L-T (Bldg 53), 700 Scott Avenue, Fort Leavenworth, KS 66027-1323

Nomenclatures of weapons and equipment in this publication are in compliance with international standardization agreements (STANAGs) 2097 and 3236. Unless this publication states otherwise, masculine nouns and pronouns do not refer exclusively to men.

Introduction

This organization guide is part of the field manual (FM) series 100-60 that documents the *capabilities-based Opposing Force (OPFOR)*. This series provides a flexible OPFOR package that users can tailor to represent a wide range of potential threat capabilities and organizations. The overall package features an armor- and mechanized-based OPFOR module and an infantry-based OPFOR module, each containing FMs describing organizations, operations, and tactics. Completing the package are FMs on OPFOR equipment and on other OPFORS in peace and conflict.

This introduction provides definitions of some basic terms used throughout the manual. For definitions of other key terms, the reader should refer to the index, where page numbers in bold type indicate the main entry for a particular topic. That page often includes a definition of the indexed term.

OPFOR VERSUS THREAT

The OPFOR is a training tool for preparing the Army to respond to a wide variety of threats. The following paragraphs explain the difference between an OPFOR and a threat and the relationships between the two.

Threat and Country-Based OPFOR

A *threat* can be any specific foreign nation or organization with intentions and military capabilities that suggest it could become an adversary or challenge the national security interests of the United States or its allies. As the Army moves into the twenty-first century, it is no longer possible to identify one or two nations or forces as the potential adversaries against which it needs to train on a regular basis.

When conflict is imminent or when US forces need to train for a particular contingency, training may focus on a specified threat force. This rehearsal for an actual mission or operation can involve a *country-based OPFOR*. Such an OPFOR should portray the specified, real-world threat force with the greatest possible fidelity, based on the best available classified and unclassified information. Cases may exist in which constraints on the use of classified information or the lack of information, at any level of classification, preclude the use of actual threat data. To fill in gaps, in such cases, trainers could use those parts of the capabilities-based OPFOR that are most consistent with what they do know about a specific threat.

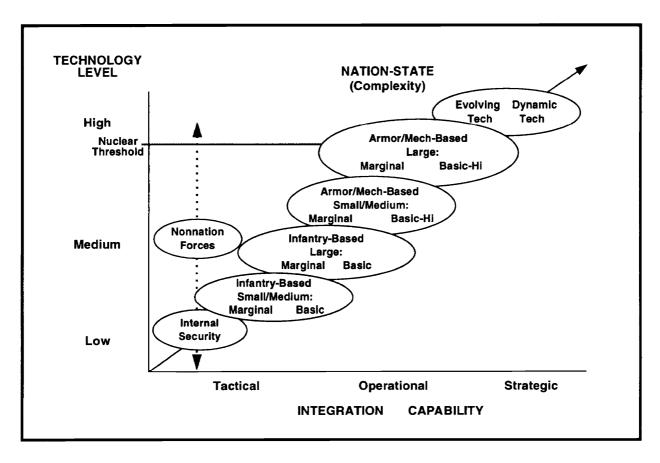

Capabilities-Based OPFOR

In more typical cases, however, the US Army simply needs to train against an OPFOR that represents a particular level of capability rather than a particular country. The *capabilities-based OPFOR* is a realistic and flexible armed force representing a composite

of varying capabilities of actual worldwide forces. It constitutes a baseline for training or developing US forces, in lieu of a specific threat force. This baseline includes doctrine, tactics, organization, and equipment. It provides a challenging, uncooperative sparring partner that is representative, but not predictive, of actual threats.

The capabilities-based OPFOR represents a break from past practices on two principal respects. First, the armor- and mechanized-based and infantry-based OPFOR modules are not simply unclassified handbooks on the armed forces of a particular nation. Rather, each module has its basis in the doctrine and organization of various foreign armies. These OPFOR modules are *composites* deliberately constructed to provide a wide range of capabilities. Secondly, the modules do not provide a fixed order of battle. Rather, they provide the *building blocks* from which users can derive an infinite number of potential orders of battle, depending on their training requirements.

The primary purpose of these FMs is to provide the basis for a realistic and versatile OPFOR to meet US military training requirements. They can support training in the field, in classrooms, or in automated simulations. However, users other than trainers may apply these FMs when they need an unclassified threat force that is not country-specific.

Spectrum of military capabilities.

INFANTRY-BASED OPFOR MODULE

The infantry-based OPFOR represents the armed forces of a developing country with limited resources. The name of that country is *the State*. The State's military structure consists primarily of ground forces. The formal name of this branch of the armed forces that corresponds to the US Army is the *Ground Forces*. These Ground Forces are primarily infantry (dismounted or motorized), with relatively few mechanized infantry and tank units and perhaps some air-borne infantry units. Aside from the Ground Forces, the State's armed forces may include any or all of the following components:

- The Air Force, including the Air Defense Command.
- The Special Operations Command, with commando and special-purpose forces.
- The Navy, consisting of a small, brown-water force.

This OPFOR can also include less capable forces, to include internal security forces, the militia, and reserves. This menu of possible forces allows US military trainers to tailor the OPFOR order of battle to meet virtually any training requirement involving an infantry-based force.

Infantry-based forces are common throughout the developing world. These forces have some armor but rely on dismounted or motorized infantry for the bulk of their combat power. At the most, they conduct set-piece operations, integrating arms at the tactical level. None of these forces is capable of meeting the most advanced armies on an even footing in conventional battle. In many respects, the infantry-based OPFOR resembles the armies of World War I, with more lethal weaponry.

Size and Capability

The infantry-based OPFOR module includes a range of potential forces that can vary in size and capability. *Small-to-medium infantry forces* have marginal integration capability (ability to conduct tactical-level combat actions with limited fire support) or basic integration capability (ability to conduct battalion-level tactical combined arms actions). In terms of technology, both groups import most of their systems. *Large infantry forces* can conduct extensive set-piece operations over broad frontages. However, they are capable of projecting military power only within their region. The key technologies that can allow this are self-propelled artillery and offensive chemical and biological warfare. The State may or may not have chemical and biological weapons, but has the capability to produce or acquire them. A country with large infantry forces can have extensive, basic weapons industries, or it may still import most systems. Although this larger force may have improved communications, the OPFOR must rely on outside states for use of communications satellites.

When opposed by an adversary of similar capabilities, an infantry-based OPFOR can conduct conventional, force-oriented combat. However, when faced with a large, technologically advanced army, it is likely to attempt to redefine the terms of conflict and pursue its aims through terrorism, insurgency, or partisan warfare. In the case of intervention by an external power or coalition, this strategy aims to undermine the enemy's will to continue the conflict without the necessity of defeating his main forces on the battlefield.¹

¹Throughout the FM 100-60 series, the term *enemy* refers not to the OPFOR but rather to the enemy of the OPFOR.

FM 100-63, *infantry-Based Opposing Force: Organization Guide*, depicts the forces of a country divided geographically into an unspecified number of military regions, each with a number of subordinate military districts. This OPFOR stations most combat forces within the military districts, which can vary widely in their strengths and capabilities. The guide allows for standing divisions, but districts with separate brigades would be much more common and in keeping with the spirit of the infantry-based OPFOR concept. At most, the State could mobilize and deploy one army-sized force capable of conducting large-scale operations against a neighboring country whose armed forces are also infantry-based. If the trainer finds himself building multiple standing divisions and armies, it may be that FM 100-60 better suits his training needs. He may find it necessary to draw some elements from both organization guides in order to constitute the appropriate OPFOR order of battle.

Compared to Armor- and Mechanized-Based OPFOR

The infantry-based OPFOR differs from the armor- and mechanized-based OPFOR primarily in terms of size, technological level, and the ability to integrate arms into operations. FM 100-60, *Armor- and Mechanized-Based Opposing Force: Organization Guide*, depicts the forces of a developed State with extensive resources devoted to maintaining a military capability that rivals that of the United States. It has a strategic capability, with strategic air and air defense forces and strategic missile forces. It probably has a nuclear capability. Unless the State is landlocked, it can have a blue-water navy and naval infantry (marines).

In the armor- and mechanized-based OPFOR, the ground forces are still the largest component. Compared to the infantry-based OPFOR, these ground forces have more standing divisions or brigades. Rather than being subordinate to military regions and districts, these divisions and separate brigades constitute several standing armies or corps. Most of these forces are in turn subordinate to army groups. Armies, corps, and army groups can vary widely in their strengths and capabilities. Even multiple army groups may come under a series of theater head-quarters that orchestrate complex, large-scale operations.

The armor- and mechanized-based OPFOR can conduct a strategic operation involving the combined forces in a theater. These forces may comprise-

- Several army groups.
- Strategic nuclear forces (strategic missile forces and strategic aviation).
- Strategic air armies.
- National air defense forces.
- A naval fleet.
- Naval infantry forces.
- Airborne forces.
- Special-purpose forces.
- National space forces.

Trainers may use any or all of these elements in an OPFOR order of battle as required.

Armor- and mechanized-based forces are the norm throughout the industrialized world. Such armies normally mount at least 40 percent of their forces in armored vehicles. They tend to modernize selected systems to match the best systems deployed by their neighbors. In terms of equipment and size, they range from small forces fielding outmoded equipment through large, capable forces fielding state-of-the-art weapons. For the most part, they still base their tactics and doctrine on World War II, either their own experience or that of their arms/doctrine suppliers. Many of these nations produce and export weapons and technology up through state-of-the-art-systems. Significant technologies that mark this class are in fire support and target acquisition.

Small-to-medium armor- and mechanized-based forces cover a wide range of technology and capability, from developing states through small, professional armies. **Large armor- and mechanized-based forces** often have more sophisticated weaponry: they field self-propelled artillery and multiple rocket launchers, artillery-delivered high-precision munitions, medium-to-heavy tanks, and limited thermal capability. This group may or may not have nuclear weapons but at least has the capability to produce or acquire them. Armor- and mechanized-based forces can conduct large-scale, combined arms operations. Joint operations are the norm in the more advanced states. These states have the logistics and command structures necessary to conduct continuous operations. Some armor- and mechanized-based forces are capable of sustained power-projection operations.

The high-technology end of the armor- and mechanized-based OPFOR approaches the level termed *complex*, *adaptive forces*. From developed nations, these most technically and tactically advanced forces can choose quality over quantity. As they modernize, they can reduce in size and still maintain a high level of military capability. These forces normally have a complex structure, with more specialized units operating highly sophisticated equipment. They are also capable of adapting to dynamic situations and seizing opportunities on the battlefield. However, such a force is exceedingly expensive to equip, train, and maintain.

Thus, the differences between the infantry-based and armor- and mechanized-based OPFOR modules are largely *scenario-dependent*. A particular training scenario may not require a large array of standing forces or justify the extensive use of mechanized infantry or tank forces. In such a case, it may be that FM 100-63 better fits the training needs.

Compared to Other OPFORs in Peace and Conflict

Compared to either of the OPFOR modules described above, other OPFORs in peace and conflict are less well defined. By their very nature, they are unpredictable. They too differ from the infantry-based OPFOR primarily in terms of size, technological level, and the ability to integrate arms into operations. In such a case, however, most military forces have lower capability than the infantry-based OPFOR. FM 100-66 depicts a variety of such forces that US forces may encounter.

On the one hand, these may be the forces of a *preindustrial nation or a nonnation group with limited assets*. Such groups cannot, or will not, invest in the weapons and technology necessary to keep pace with the best militaries in their regions. Most of their military organizations

are *ad hoc* rather than standing organizations with predictable structures. These forces range in size from irregular forces, constabularies, and internal security forces to light infantry units. There is no such thing as a standard light infantry force; they come in all shapes and sizes. The common thread is that they have little or no organic, heavy equipment.

Like the lower end of the infantry-based OPFOR, these forces are likely to attempt to deal with a larger, more technologically advanced army through terrorism, insurgency, or partisan warfare. They do not try to meet such an enemy head-on in conventional combat. They prefer hit-and-run raids, ambushes, ruses, sabotage, and assassinations. They try to be unpredictable and invisible to view, employing methods not anticipated by their enemies. They do not fight by the rules of conventional warfare.

On the other hand, these OPFORs may also include forces that are better-equipped and better-trained. Such a force may be part of or sponsored by a wealthy criminal element or have the backing of a wealthy outside power. It may still be small and lightly armed but could have sophisticated, state-of-the art light weapons. The force is light not out of austerity but for practical reasons, because the lightness of the equipment enhances mobility. It may also have high-technology communications and reconnaissance means.

Lastly, there may be occasions where the OPFORs in peace or conflict include a sophisticated military organization with heavier weapons. If the US force is participating in a peacekeeping operation, for example, the OPFOR may be the recognized military of a belligerent nation. As such, it could include infantry-based or armor- and mechanized-based forces of the types found in FMs 100-63 and 100-60, respectively. Likewise, some of the types of OPFOR described in FM 100-66 can also appear during war.

ORGANIZATION CHARTS

The organization charts in this guide focus on maneuver units. They begin with the largest maneuver units and work down to the smallest. Whenever feasible, the guide breaks down subordinate maneuver units, as well as combat support and combat service support units, in greater detail.

Maneuver Units

Since *motorized infantry* units are the most common in this infantry-based OPFOR, these units come first in this organization guide. Such units differ from regular *infantry* primarily by having trucks available to transport all elements subordinate to the unit when necessary. The distinction between infantry and motorized infantry becomes clear only at brigade level, since the trucks for movement of infantry are organic to motorized infantry brigades. Within either type of brigade, the basic maneuver units from squad through company are simply infantry. At battalion level, there are no organic trucks for transporting any infantry companies, although the infantry battalion headquarters has a few. The motorized infantry battalion also has some wheeled vehicles in its signal and logistics support elements. At battalion level and higher, subordinate units common to both infantry and motorized infantry have their basic entry only under the motorized parent unit.

Following the infantry and motorized infantry units, in descending order of likelihood, come the *mechanized infantry* and *tank* units. Even an infantry-based OPFOR usually has some armored and mechanized forces. Again, any subordinate units common to both mechanized infantry or tank units and motorized infantry units do not repeat.

In OPFOR terminology, a *separate* unit is one that is not subordinate to a parent unit of the same arm. For example, a separate tank battalion is not part of a tank brigade. However, it may be part of a mechanized infantry brigade or directly subordinate to a motorized infantry, infantry, or mechanized infantry division. (The infantry-based OPFOR has no tank divisions.) Similarly, a separate motorized infantry brigade is not part of a motorized infantry division (or any division, for that matter). It is directly subordinate to a military district or an army. In contrast, a *divisional* brigade is always part of a division.

The basic maneuver unit is the *brigade* consisting of three or four maneuver battalions and a wide array of combat support and combat service support elements. Some infantry-based forces, however, may call the same organization a *regiment*. In this case, the difference in terminology is merely semantic and does not signify a different structure or capability.

Combat Support and Combat Service Support Units

Aside from *organic* combat support and combat service support units, Ground Forces maneuver units may receive additional support from the *national asset pool*. The General Staff/Ground Forces Headquarters can use such units, listed as *national*, to tailor support to various Ground Forces organizations. The numbers and types of units in the national asset pool can vary according to the situation. Their inclusion in this guide merely provides an option for, but does not mandate their inclusion in any order of battle developed from this guide. Users should determine the proper sizing and allocation of the national asset pool based on training requirements.

Flexibility Within Realistic Limits

Headings within each chapter indicate the name of the specific unit depicted and of all organizations to which this type of unit may be subordinate. Organization charts depict all possible subordinate units. If training objectives do not require the use of all elements shown in a particular organization, *users can omit the elements they do not need.* Some organization charts have blocks showing two alternatives for a particular type of subordinate unit. For example, a military district might have either an engineer company or an engineer battalion. In most cases, the unit listed first is the norm, but the other alternative is an option. Many organization charts have notes and/or footnotes that identify possible variations in organizational structure or equipment. These alternatives allow users to select the basic organization or the variation that best suits their training requirements.

Stacked blocks in the organization charts indicate multiple, identical units subordinate to a particular organization. **Dashed blocks** indicate units that may or may not be present in the type of organization shown.

Users must ensure that the size and composition of the OPFOR is sufficient to meet training objectives and requirements. However, total assets organic to a Ground Forces organization or allocated to it from higher levels should not exceed that which is *realistic and appropriate* to the training scenario. Skewing the force ratio in either direction negates the value of training.

Page References for Detail

In the main organization chart for any parent unit, subordinate units defined elsewhere in greater detail have *page references* beneath their block in the organization chart. This approach can lead the user to the subordinate unit, even if its organization chart appears in another chapter or another part of the same chapter. To avoid excessive duplication, subordinate units common to several types of parent unit receive detailed treatment only once, with subsequent cross-references back to that basic entry. Units without such page references do not have separate entries with further detail.

Occasionally, there may be a small unit that does not have its own organization chart showing further subordinates. However, the user may find a page reference leading to the parent unit's table of principal items of equipment, which breaks down equipment totals by subordinate units, including this one.

PRINCIPAL ITEMS OF EQUIPMENT

For organizations of brigade size or smaller, this book provides a table of principal items of equipment. For brigades and regiments, as well as selected battalions, this table provides a quick overview of the holdings for subordinate units and equipment totals for the unit as a whole. Units above brigade/regiment level either have no fixed structure or have so many variations in possible structure that equipment totals are difficult to quantify. Therefore, the organization guide leaves those specifics to users who build actual orders of battle for a specific OPFOR in a specific scenario. The OPFOR order of battle must meet the user's training requirements, based on the menu of possible organizational parts provided in this manual.

Equipment totals include individual weapons only at maneuver battalion level and below. The same is true of night-vision devices (goggles and sights). These figures vary widely from unit to unit, although separate brigades tend to field more goggles in combat support and combat service support units than do divisional brigades. With the exception of maneuver units (battalion and below), accounting for the varying numbers of night-vision devices, especially the goggles worn by vehicle drivers, is difficult.

This guide provides example equipment types and the numbers of each type typically found in specific organizations. The purpose is to give users a good idea of what an OPFOR structure should look like. However, training requirements may dictate some modifications to this baseline. Users should exercise caution in modifying equipment holdings, since this impacts on an OPFOR unit's organizational integrity and combat capabilities.

Baseline Equipment

A developing country may equip its infantry-based OPFOR primarily with systems imported from more advanced, weapons-producing countries. For illustrative purposes, the equipment lists in this manual show systems produced by the former Soviet Union (FSU). There are two reasons for using FSU-produced equipment as the baseline. First, many potential threat countries have equipped their armed forces with systems that the FSU and its successor states have built in large numbers and *proliferated widely* throughout the world. Second, this equipment is *representative of a unit's or force's technological capability*. Listing these familiar, well-documented systems paints an immediate, concrete picture of that capability. Listing generic equipment descriptors, such as *medium tank* or *antitank guided missile*, would not create such a clear impression of capabilities. Moreover, generic descriptors would not lead to the development of consistent equipment sets. This organization guide, therefore, normally uses generic descriptors only when the choice of systems would not materially affect basic unit or force capabilities.

Equipment Substitution

To achieve specific training objectives or merely to provide variety in the training environment, users can substitute other equipment for those listed as the baseline. Appendix A contains matrices with suggested examples of appropriate substitutions for major maneuver and fire support systems. Appendix B does the same for engineer equipment. Appendix C lists examples of cargo trucks, trailers, and radios corresponding to the generic descriptors used in equipment lists. Each appendix also provides general guidelines for the substitution process.

Appendixes A, B, and C are guides; they cannot be all-inclusive, listing every conceivable system available worldwide. In constructing an OPFOR order of battle, therefore, trainers may substitute systems not listed in the appendixes. However, they should follow the same general philosophy and the guidelines prescribed in the appendixes. To assist in the substitution process, FM 100-65, *Opposing Force Equipment Guide*, will present a wider selection of major systems from which users may choose.

Chapter 1 Military Districts and **Motorized Infantry Divisions**

Military districts and maneuver divisions are the highest-level tactical organizations in the Ground Forces. Military districts are geographical entities, but are also a level of command. Districts generally contain one or more separate brigades (infantry, motorized infantry, or mechanized infantry) and perhaps a tank brigade. However, a district may have a standing division (infantry, motorized infantry, or mechanized infantry) based on divisional brigades. For more information on infantry and mechanized infantry divisions, see Chapter 2. For more information on separate and divisional brigades, see Chapters 3 and 4.

Divisions can be either standing or mobilized from the reserves. Standing divisions may exist in districts along an international border, in districts that contain historically threatened avenues of approach, or around critical cities or facilities. Divisions mobilized from the reserves may draw combat support and combat service support from reserves or receive them from the national asset pool. The commander of the district in which a division is garrisoned or mobilized is also the division commander, as long as the division remains in that district.

Military District

Military districts are *geographical* entities which delineate the territorial responsibilities and disposition of forces subordinate to a military region (see p. 5-3). There is *no standard composition* for forces within a district. The number and types of units can vary widely from district to district. Therefore, the following organization chart merely outlines the types of units and facilities that might or might not be present in a given district.

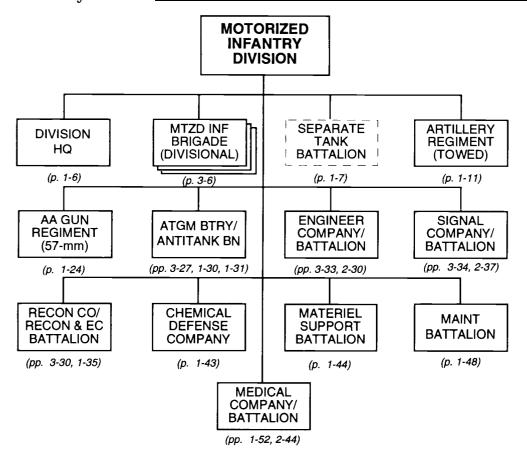

NOTES:

1. Districts generally contain one or more separate brigades, but may have a standing division (infantry, motorized infantry, or mechanized infantry). During mobilization, a district may form a division from the reserves, possibly using a separate brigade as a mobilization base, However, this would occur only in a high-priority district. Even a district with a standing division in peacetime might have that division resubordinated to a higher-priority district or region in wartime.

(continued)

Military	y District ((continue	d)
IVIIIICUI	,	(COIICIII ac	u,

- 2. A basically rural, mountainous district with no major population centers may have only one or two separate infantry brigades, with little or no additional combat support and combat service support. In addition to these regular army forces, such a district may have a single militia infantry battalion.
- 3. A district astride a major avenue of approach, or one that contains several major population/industrial centers, may contain two or three separate infantry brigades (or motorized or mechanized infantry) and perhaps a tank brigade. Such a district is more likely to have some of the additional combat support and combat service support assets allocated from the national level through the region. Depending on the size of its population centers, a district might be able to constitute a brigade-sized militia force, or at least multiple battalions.
- 4. A district may have organic or allocated artillery, antitank, and air defense units. If a district's maneuver units are predominantly mechanized infantry and tank forces, these fire support units are more likely to be self-propelled. If the maneuver units are infantry or motorized infantry, the fire support units are more likely to be towed.
- 5. One high-priority district is the Capital District, which contains the State's national capital. The Capital Defense Forces garrisoned there are typically the best-equipped in the country. They are specially tailored for their primary mission of defending the capital and for their secondary mission as the strategic reserve. (See p. 5-6.)

NOTES:

- 1. The basic maneuver units in this division are three motorized infantry brigades (divisional). These divisional brigades differ structurally from their separate counterparts normally found within military districts. In addition to its motorized infantry brigades, this division may or may not have a separate tank battalion.
- 2. Most motorized infantry divisions have an ATGM battery and company-sized engineer, signal, reconnaissance, and medical units. However, some better-equipped motorized infantry divisions may have battalion-sized antitank, engineer, signal, reconnaissance (and EC), and medical units.
- 3. Motorized and mechanized infantry divisions are the basic maneuver formations of an expeditionary army (see p. 5-5). Such an army, mobilized in one military region to conduct large-scale offensive operations, may include divisions resubordinated from other regions or districts.
- 4. Divisions can be either standing or mobilized from the reserves. Standing divisions may exist in districts along an international border, in districts that contain historically threatened avenues of approach, or around critical cities/facilities. Standing division have the assets shown above, even before mobilization. Divisions mobilized from the reserves may draw the combat support and combat service support shown above from reserves or receive them from the national assets pool. The commander of the district in which a division is garrisoned or mobilized is also the division commander, as long as the division remains in that district.
- 5. Motorized infantry divisions are more common than mechanized or infantry divisions.

NOTES:

- 1. Divisions always have regiments with only one of each type of battalion. The equipment listing below does not include a second gun-howitzer battalion.
- 2. Most regiments have one of each type of battalion: howitzer, gun-howitzer, and MRL. Regiments with two 152-mm gun-howitzer battalions are more common in districts with more than three maneuver brigades.

Trailer, Generator	1	Warning Receiver	1

FOOTNOTE: * Some units may have the older FIRE CAN fire control radar and the PUAZO-6 fire control director with an optical rangefinder. In that case the battery would have two additional medium trucks as prime movers for this combination of towed fire control systems, but it does not have the truck-mounted FLAP WHEEL radar van.

Trailer, Cargo, 2-Axle	10	Radio Relay, VHF/UHF	1
Trailer, Generator	1	Warning Receiver	1

NOTES:

- 1. Some antitank units from the national asset pool have three antitank gun batteries instead of two antitank gun batteries and one ATGM battery. An army, region, district, or division may receive such a battalion, known as an antitank gun battalion. (See p. 1-31.)
- 2. Separate mechanized infantry brigades and well-equipped districts can have either the battalion as depicted above or a battalion composed entirely of ATGM batteries, in which case it will be called an ATGM battalion (see p. 2-26). During force modernization, the tendency is for districts/brigades with offensive contingency missions to have an ATGM battalion, whereas districts/brigades with primarily defensive contingency missions have the standard antitank battalion.

NOTES:

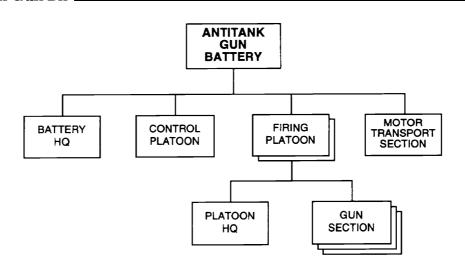

- 1. Some antitank units from the national asset pool are antitank gun battalions. They have three antitank gun batteries instead of two and one ATGM battery of a standard antitank battalion (see p. 1-30).
- 2. The General Staff can allocate an antitank gun battalion to an army or military region. In turn, the army or region can allocate such a battalion to a division or district expecting the greatest armor threat.

Reconnaissance and Electronic Combat Battalion, Mtzd Inf Div and Inf Div, or MD or Army or DMI

NOTES:

- 1. A reconnaissance and electronic combat (EC) battalion subordinate to the Directorate of Military Intelligence (DMI) would normally have an organic remotely-piloted vehicle (RPV) squadron. If the General Staff allocates a reconnaissance and EC battalion from the DMI to a military region or an expeditionary army, it normally includes an RPV squadron. District and divisional reconnaissance and EC battalions mayor may not have an organic RPV squadron.
- 2. Some infantry divisions and more poorly equipped military districts may have a reconnaissance battalion that lacks a jamming company.
- 3. The equipment listing for the reconnaissance and EC battalion includes the assets of the jamming company as well as the RPV squadron.

Chapter 2 Infantry and Mechanized Infantry Divisions

The majority of divisions in an infantry-based OPFOR are either infantry or motorized infantry. The primary difference between motorized infantry and infantry divisions is that the former has trucks at brigade level to transport its infantry maneuver elements, while the latter does not. Even an infantry-based force can have some mechanized infantry divisions with infantrymen mounted in APCs or IFVs. For information on the motorized infantry division, and the organizations it has in common with either infantry or mechanized infantry divisions, see Chapter 1. For more information on separate and divisional brigades, see Chapters 3 and 4.

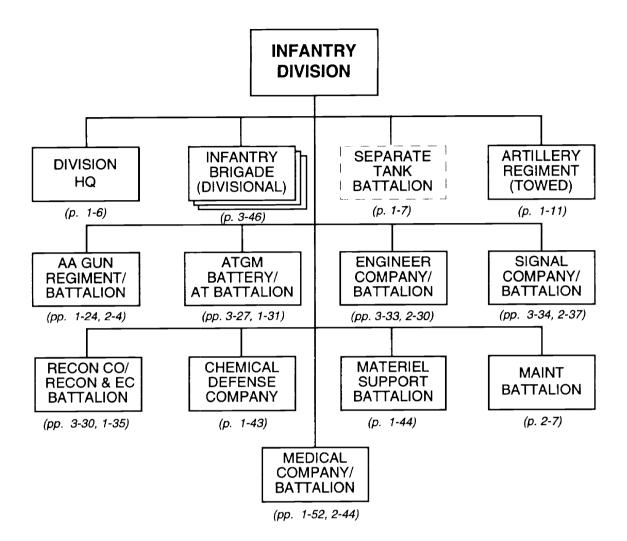

Divisions can be either standing or mobilized from the reserves. Standing divisions may exist in districts along an international border, in districts that contain historically threatened avenues of approach, or around critical cities or facilities. Divisions mobilized from the reserves may draw combat support and combat service support from reserves or receive them from the national asset pool. The commander of the district in which a division is garrisoned or mobilized is also the division commander, as long as the division remains in that district.

Supply and Service Platoon, Med Bn	2-47

NOTES:

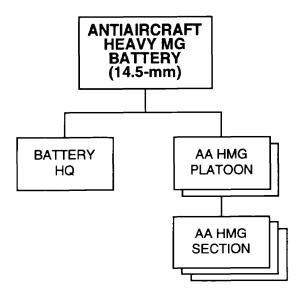

- 1. The basic maneuver units in this division are infantry brigades (divisional). Divisional brigades differ structurally from their separate counterparts normally found within districts. In rare cases, an infantry division may include a separate tank battalion.
- 2. Most infantry divisions have company-sized engineer, signal, reconnaissance, and medical units. However, some better-equipped infantry divisions may have battalion-sized units of these types.
- 3. Divisions can either be standing or mobilized from the reserves. Standing divisions may exist in districts along an international border, in districts that contain historically threatened avenues of approach, or around critical cities/facilities. Standing divisions have the assets shown above, even before mobilization. Divisions mobilized from the reserves may draw the combat support and combat service support assets shown above from reserves or receive them from the national asset pool. The commander of the district in which a division is garrisoned or mobilized is also the division commander, as long as the division remains in that district.
- 4. Infantry divisions are less common than motorized infantry divisions.

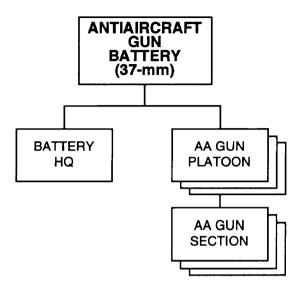

Equipment	<u>Total</u>	Equipment	Total
14.5-mm AA HMG, ZPU-2		Trailer, Kitchen	3
or ZPU-4	6	Trailer, POL (1,200-Liter)	3

NOTES:

- 1. The basic maneuver units in this division are three mechanized infantry brigades (divisional). The normal mix is two APC-equipped brigades and one IFV-equipped brigade, or vice versa. These divisional brigades differ structurally from their separate counterparts normally found within military districts. In addition to its mechanized infantry brigades, this division normally has a separate tank battalion.
- 2. Most mechanized infantry divisions have battalion-sized antitank, engineer, signal, and medical units. However, some not-so-well-equipped mechanized infantry divisions may have only an ATGM battery and company-sized engineer, signal, and medical units.
- 3. Mechanized and motorized infantry divisions are normally the basic maneuver formations of an expeditionary army (see p. 5-5). Such an army, mobilized in one military region to conduct large-scale offensive operations, may include divisions resubordinated from other regions or districts.
- 4. Divisions can be either standing or mobilized from the reserves. Standing divisions may exist in districts along an international border, in districts that contain historically threatened avenues of approach, or around critical cities/facilities. Standing divisions have the assets shown above, even before mobilization. Divisions mobilized from the reserves may draw the combat support and combat service support assets shown above from reserves or receive them from the national asset pool. The commander of the district in which a division is garrisoned or mobilized is also the division commander, as long as the division remains in that district.
- 5. Mechanized infantry divisions are less common than motorized infantry divisions.

Self-Propelled Artillery Regiment, Mech Inf Div or MD or Army or CDF or National

NOTES:

- 1. Divisions always have regiments with only one of each type of battalion. The equipment listing below does not include a second gun-howitzer battalion.
- 2. Most regiments have one of each type of battalion: howitzer, gun-howitzer, and MRL. Regiments with two 152-mm gun-howitzer battalions are more common in districts with more than three maneuver brigades.

Trailer, Generator		Warning Receiver	1
Trailer, Kitchen	1		

NOTES:

- 1. Separate mechanized infantry brigades and well-equipped districts can have either the ATGM battalion as depicted above or an antitank battalion (see p. 4-26) composed of two antitank gun batteries and one ATGM battery.
- 2. During force modernization, the tendency is for districts/brigades with offensive contingency missions to have an ATGM battalion, whereas districts/brigades with primarily defensive contingency missions have the standard antitank battalion.

Reconnaissance and Electronic Combat Battalion, Mech Inf Div or MD or Army or CDF or DMI

NOTES:

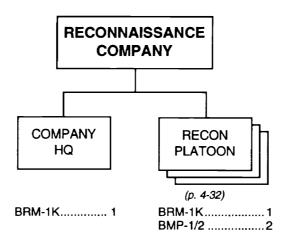

- 1. A reconnaissance and electronic combat (EC) battalion subordinate to the CDF or the DMI would normally have an organic RPV squadron. If the General Staff allocates a reconnaissance and EC battalion from the DMI to a military district or an expeditionary army, it normally includes an RPV squadron.
- 2. District and divisional reconnaissance and EC battalions may or may not have an organic RPV squadron. However, a mechanized infantry division is more likely to have one than are motorized infantry or infantry divisions.
- 3. The equipment listing for the reconnaissance and EC battalion includes the assets of the RPV squadron.

FOOTNOTES:

^{*} When the armored tracked minelayer GMZ replaces the towed PMR, the combat engineer company needs only five medium, trucks, but has a total of eight VHF, vehicle mount, medium-power radios.

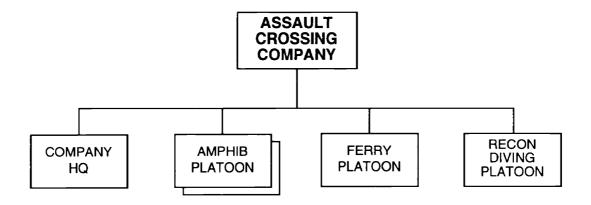

^{**} With the GSP, 12 half-ferries form 6 ferries; with the PMM-2, there is only one vehicle per ferry.

Chapter 3 Motorized Infantry and Infantry Brigades

The basic maneuver unit is the *brigade*, consisting of maneuver battalions and a wide array of combat support and combat service support elements. A *separate* brigade is not part of a division. Instead, it is directly subordinate to a military district or an army. In contrast, a *divisional* brigade is always part of a division.

Motorized infantry brigades are the most common in this infantry-based OPFOR. Such units differ from regular **infantry** primarily by having trucks available to transport all elements subordinate to the unit when necessary. The distinction between infantry and motorized infantry becomes clear only at brigade level, since the trucks for movement of infantry are organic to the motorized infantry brigade. Within either type of brigade, the basic maneuver units from squad through company are simply infantry. At battalion level, there are no organic trucks for transporting any infantry companies, although the infantry battalion headquarters has a few. The motorized infantry battalion also has some wheeled vehicles in its signal and logistics support elements. At battalion level and higher, subordinate units common to both infantry and motorized infantry have their basic entry under the motorized parent unit.

Motorized Infantry	/ Battalion.	Mtzd Inf Bde	(Sep	and Div)	(continued))

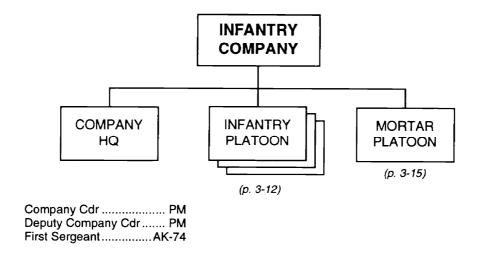

NOTES:

- 1. A motorized infantry battalion does not have organic transport assets to move its infantry companies and weapons company. Rather, it relies on the brigade-level motor transport battalion (p. 3-38) to provide trucks for movement over longer distances. Movement of all 3 infantry companies requires a total of 18 medium trucks. A weapons company requires 3 utility trucks and 12 light trucks.
- 2. Some motorized infantry battalions may have a mortar battery with nine 82-mm mortars (p. 3-24) instead of a mortar platoon in the weapons company. In that case, there would probably be no 60-mm mortars in the infantry companies

Battalion Headquarters, Mtzd Inf Bn

Mortar Battery, Mortar Bn or Mech Inf Bn or Mtzd Inf Bde (Sep), Inf Bde (Sep and Militia), and Mech Inf Bde (Sep)

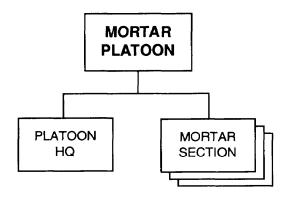

PRINCIPAL ITEMS OF EQUIPMENT

Equipment	<u>Total</u>	<u>Equipment</u>	<u>Total</u>
120-mm Mortar, M1943/2S12 or		Truck, Light	7
82-mm Mortar, M1937/2B9	6	Rangefinder, Stereoscopic, DS-1	1
9-mm Pistol, PM	14	Periscopic Aiming Circle, PAB2A	1
5.45-mm Assault Rifle, AK-74	47	Collimator	6
7.62-mm GP MG, PKM	2	Night-Vision Goggles (Driver)	3
40-mm Under-Barrel Grenade Laur	ncher,	Night-Vision Sight (Small Arms)	6
BG-15	6	Radios:	
ATGL, RPG-7V	6	VHF, Manpack, Low-Power	5
Truck, Utility	1	VHF, Vehicle Mount,	
·		Medium-Power	1

NOTES:

- 1. The infantry brigade (militia) is more likely to have 82-mm mortars and does not have the night-vision devices listed above.
- 2. Some motorized infantry or infantry battalions may have a mortar battery with nine 82-mm mortars instead of a mortar platoon in the weapons company. In that case the battery would have a third mortar platoon.

Mortar Platoon, Mortar Btry, Mortar Bn or Mech Inf Bn or Mtzd Inf Bde (Sep), Inf Bde (Sep and Militia), and Mech Inf Bde (Sep)

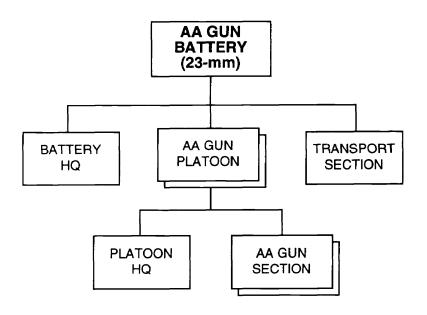

PRINCIPAL ITEMS OF EQUIPMENT

Equipment	<u>Total</u>	Equipment	<u>Total</u>
120-mm Mortar, M1943/2S12		ATGL, RPG-7V	3
or 82-mm Mortar, M1937/2B9	3	Night-Vision Sight (Small Arms)	4
9-mm Pistol, PM	4	Collimator	3
5.45-mm Assault Rifle, AK-74	18	Radio, VHF, Manpack, Low-Power	1

NOTE: Three light trucks from the mortar battery's motor transport section normally carry the three mortar sections and the platoon headquarters. However, the mortar crew can move the mortar over short distances when necessary.

Antiaircraft Gun Battery (23-mm), Mtzd Inf Bde (Sep and Div), Inf Bde (Sep, Div, and Militia), and Abn Inf Bde, or Arty Regt or Arty Bde or MRL Bde or SAM Bn (SA-4)

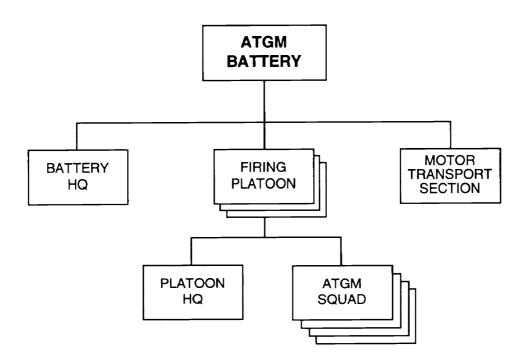

PRINCIPAL ITEMS OF EQUIPMENT

		Medium-Power.	1
		Warning Receiver	1

NOTE: In some cases, the medium trucks in this motor transport section may carry a 12.7-mm HMG or a 30-mm automatic grenade launcher. These weapons provide a minimum of fire support for the reconnaissance company during movement by vehicle.

Engineer Company, Mtzd Inf Bde (Sep and Div) and Inf Bde (Sep and Div), or Mtzd Inf Div and Inf Div, or MD or MR_____

PRINCIPAL ITEMS OF EQUIPMENT

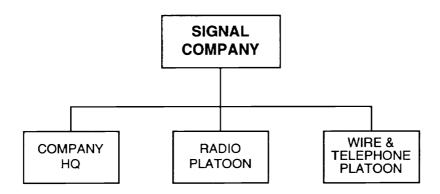

Equipment	<u>Total</u>	<u>Equipment</u>	<u>Total</u>
ATRL, RPG-18/22	4	Bridge, Truck-Launched	4
Flamethrower, LPO/RPO	4	Ditching Machine, PZM/TMK	4**
Truck, Utility	4	Route-Clearing Vehicle, BAT/PKT	1**
Truck, Medium	9	Minelayer, PMR	3
Truck, Crane	2	Mine Detector, DIM	1
Truck, Dump	2	Radios:	
Truck, Water Purification		VHF, Vehicle Mount,	
Van, Maintenance	1	Medium-Power	1
Van, Signal	1	HF or VHF, Manpack,	
Trailer, Cargo, 1-Axle		Low-Power	4
Trailer, Cargo, 2-Axle		HF, Vehicle Mount,	
Trailer, Kitchen	1	Medium-Power	1
Trailer, Water (900-Liter)	1		

NOTE: The motorized infantry division or infantry division normally has only an engineer company organic to it. However, such a division would probably receive additional support from national-level engineer organizations.

FOOTNOTES:

- * An engineer company in a motorized infantry brigade or division normally does not have the six 1-axle cargo trailers shown here.
- ** An engineer company in an infantry brigade normally does not have ditching machines or a route-clearing vehicle.

Signal Company, Mtzd Inf Bde (Sep and Div) and Inf Bde (Sep and Div), or Mtzd Inf Div and Inf Div, or MD_____

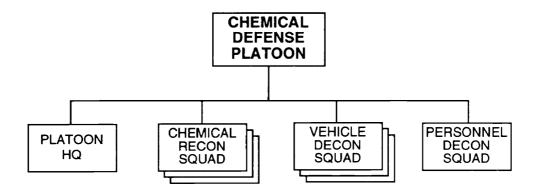

PRINCIPAL ITEMS OF EQUIPMENT

<u>Equipment</u>	<u>Total</u>	<u>Equipment</u>	<u>Tota</u>
Truck, Utility	5	HF/VHF, Vehicle Mount,	
Truck, Light		High-Power	2
Van, Signal	10	HF, Manpack, Low-Power	2
Motorcycle	3	HF, Vehicle Mount, High-Power.	1
Trailer, Generator	1	HF, Vehicle Mount,	
Radios:		Medium-Power	2
VHF, Manpack, Low-Power	7	Radio Relay, VHF/UHF	2
HF/VHF, Vehicle Mount,		Warning Receiver	3
Medium-Power	8	•	

NOTES:

- 1. The radios listed normally support the brigade headquarters, but the brigade may attach some to subordinate headquarters.
- 2. A motorized infantry division or infantry division with only a signal company organic to it would probably receive additional signal support from the national asset pool.
- 3. Motorcycles provide messenger/courier service.
- 4. Field telephones and switchboards are standard equipment in the wire and telephone platoon.

Chemical Defense Platoon, Mtzd Inf Bde (Sep and Div), Mech Inf Bde (Sep and Div), and Tank Bde, or Arty Regt or SP Arty Regt or Arty Bde or Air Defense Regt or AA Gun Regt or MRL Bde or SAM Regt (SA-6 and SA-8) or SAM Bde (SA-2, SA-3, SA-4, and SA-11) or Engr Bde

Equipment	<u>Total</u>	Equipment	<u>Total</u>
ATRL, RPG-18/22	3	Radios:	
Truck, Utility	1	VHF, Manpack, Low-Power	1
Truck, Medium	54	VHF, Vehicle Mount,	
Night-Vision Goggles (Driver)	4	Medium Power	3

NOTES:

- 1. The infantry companies in a motorized infantry battalion do not have organic transportation assets. Rather, they rely on the brigade-level troop transport company to provide trucks for troop movement.
- 2. Each medium truck can carry up to two infantry squads or weapons squads. Thus, each 18-truck troop transport platoon is capable of transporting the squads of one motorized infantry battalion. The trucks also have room to carry platoon and company headquarters elements, as well as the company-level mortar platoon.
- 3. One or two medium trucks in each troop transport platoon may carry a 12.7-mm HMG or a 30-mm automatic grenade launcher. These weapons provide a minimum of fire support for the unit during movement by vehicle.
- 4. Similarly, the weapons company of a motorized infantry battalion receives transportation support from the brigade-level weapons transport company (p. 3-40). Other units subordinate to the motorized infantry battalion provide their own transportation.

Weapons Transport Company, Motor Transport Bn

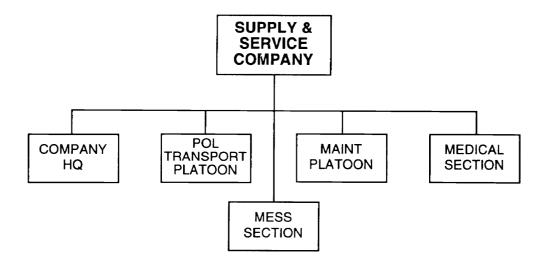

PRINCIPAL ITEMS OF EQUIPMENT

Equipment	<u>Total</u>	Equipment	<u>Total</u>
ATRL, RPG-18/22	3	Radios:	
Truck, Utility	10	VHF, Manpack, Low-Powe	r1
Truck, Light		VHF, Vehicle Mount,	
Night-Vision Goggles (Driver)		Medium Power	3

NOTES:

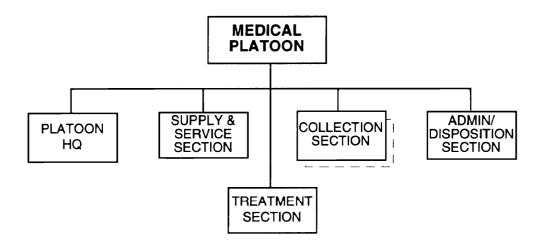

- 1. The weapons company of a motorized infantry battalion does not have organic transportation assets. Rather, it relies on the brigade-level weapons transport company to provide trucks for movement over longer distances.
- 2. A weapons transport platoon with 3 utility trucks and 12 light trucks can transport the weapons and crews of one weapons company.

PRINCIPAL ITEMS OF EQUIPMENT

Equipment	<u>Total</u>	<u>Equipment</u>	Total

NOTES:

- 1. Districts, depending on their population/population centers, may or may not be able to constitute a brigade-sized militia force; many districts have, at most, a battalion. These forces may or may not act as an integrated force. Regardless of militia size, every village, farm cooperative, or factory has a militia formation, manned in wartime by the workers and peasants, over-age reservists, medically-retired soldiers, women, and young men not yet old enough for military service. The militia could receive additional combat support and combat service support assets from the district, but this would be extremely rare.
- 2. Although included in the equipment totals of some of the subordinate units referenced above, night-vision sights or goggles are not normally organic to militia forces.

Chapter 4 Mechanized Infantry and Tank Brigades

The basic maneuver unit is the **brigade**, consisting of maneuver battalions and a wide array of combat support and combat service support elements. A separate brigade is not part of a division. Instead, it is directly subordinate to a military district or an army. In contrast, a divi**sional** brigade is always part of a division.²

An infantry-based OPFOR consists primarily of motorized infantry or infantry units. However, even an infantry-based OPFOR has some *mechanized infantry* and tank brigades. The mechanized infantry brigade has two basic types: one equipped with armored personnel carriers (APCs) and one equipped with infantry fighting vehicles (IFVs). Each type also has separate and divisional versions. A mechanized infantry brigade may have some subordinates in common with a division (see Chapters 1 and 2). For brigade subordinates also common to motorized infantry brigades, see Chapter 3.

CONTENTS

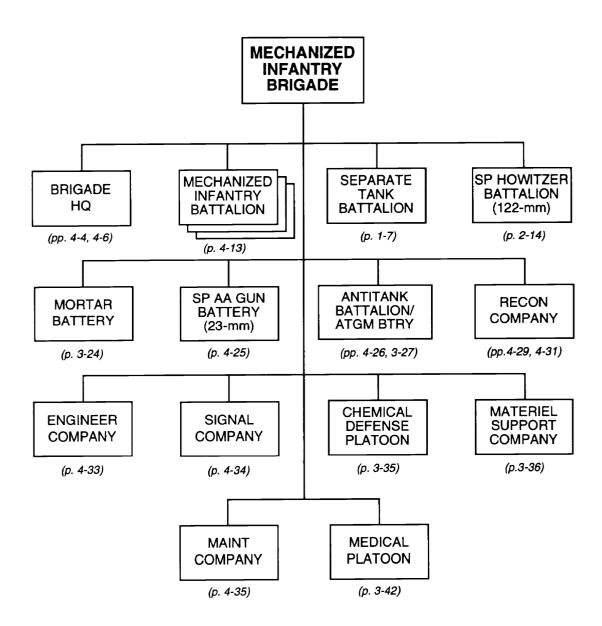

Mechanized Infantry Brigade (Separate)	4-3
Mechanized Infantry Brigade (APC) (Separate)	4-4
Mechanized Infantry Brigade (IFV) (Separate)	4-6
Mechanized Infantry Brigade (Divisional)	
Mechanized Infantry Brigade (APC) (Divisional)	4-9
Mechanized Infantry Brigade (IFV) (Divisional)	4-11
Mechanized Infantry Battalion (APC), Mech Inf Bde (Sep and Div)	4-13
Mechanized Infantry Battalion (IFV), Mech Inf Bde (Sep and Div) and Tank Bde	4-13
Battalion Headquarters, Mech Inf Bn	4-15
Mechanized Infantry Company, Mech Inf Bn	4-16
Mechanized Infantry Platoon, Mech Inf Co	4-17
Mechanized Infantry Squad, Mech Inf Plt	4-18
SAM Platoon, Mech Inf Bn or SAM Bn (SA-11)	4-19
Automatic Grenade Launcher Platoon, Mech Inf Bn	4-20
Automatic Grenade Launcher Squad, AGL Plt, Mech Inf Bn	4-21
Antitank Platoon, Mech Inf Bn (APC)	
ATGM Platoon, Mech Inf Bn (IFV)	4-23
Supply and Service Platoon, Mech Inf Bn	4-24

¹Some infantry-based forces may call the same organization a *regiment*. This difference in terminology does not signify a different structure or capability.
² Since the infantry-based OPFOR has no tank divisions, all tank brigades are actually separate. With no divisional

counterpart, however, the designation as separate is superfluous.

	or Separate Tank Bn	4-48

NOTES:

- 1. A mechanized infantry brigade normally has all mechanized infantry battalions of the same type (APC-equipped or IFV-equipped). In rare cases, however, a mix of the two battalion types may occur.
- 2. The principle items of equipment that follow depict normal brigade structures. These have either all APC-equipped mechanized infantry battalions or all IFV-equipped battalions.

FOOTNOTE:

^{*} Some separate mechanized infantry brigades (IFV) may have only an ATGM battery (see p. 3-27).

NOTES:

- 1. A mechanized infantry brigade normally has all mechanized infantry battalions of the same type (APC-equipped or IFV-equipped). In rare cases, however, a mix of the two battalion types may occur.
- 2. The principal items of equipment that follow depict normal brigade structures. These have either all APC-equipped mechanized infantry battalions or all IFV-equipped battalions.

Chapter 5 Operational- and Strategic-Level Ground Forces

The Ground Forces are the largest branch of the armed forces. Their tactical maneuver units (described in Chapters 1 through 4) are subordinate to military regions. These regions, or an expeditionary army which could form in one region, constitute the *operational* level of forces. The Ground Forces also have a national asset pool (described in Chapter 6). The General Staff/Ground Forces Headquarters can use this pool of combat support and combat service support units to tailor support to military regions. The Capital Defense Forces, aside from protecting the national capital, can serve as a *strategic reserve*. The Ground Forces may include an airborne infantry brigade. This airborne force is a *strategic* asset which remains under the direct control of the General Staff/Ground Forces Headquarters.

Ground Forces

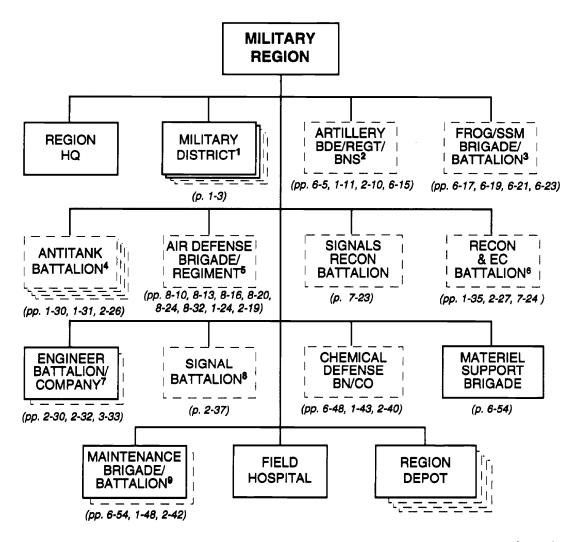

NOTES:

- 1. The Ground Forces are the largest branch of the armed forces. Most maneuver units are subordinate to military districts which in turn are subordinate to the military regions. These units, along with the national asset pool, comprise the bulk of the Ground Forces.
- 2. Compared with the rest of the Ground Forces, the Capital Defense Forces are fewer in number. They also have more narrowly defined missions and methods of employment.
- 3. The national asset pool is actually a pool of Ground Forces assets. It contains no maneuver forces but rather a variety of combat support and combat service support assets. The General Staff/Ground Forces Headquarters can allocate or reallocate these assets as the situation requires.

Military regions are *geographical* entities that delineate territorial responsibilities and disposition of the State's armed forces. Each region has a number of subordinate military districts. The number varies from two to four districts. Three districts is the norm. Unless a region serves as the basis for an expeditionary army (p. 5-5), all maneuver units in a region are subordinate to the districts. A typical region has few organic combat support and combat service support assets other than those that belong to districts.

All other units present in a region come from the *national asset pool*, the Air Defense Command, or the Directorate of Military Intelligence. The number and types of such units can vary widely from region to region, depending on a region's size and mission. Therefore, the following organization chart merely outlines the types of units that might or might not be present in a given region.

(continued)

Military Region (continued)

FOOTNOTES:

Not all military districts within a region have the same composition. For example, a region could have two districts composed of separate brigades and one district with a standing division composed of divisional brigades.

² The region has no organic artillery at region level. Depending on its mission, it receives tube artillery and MRL units ranging from single battalions to regiments and brigades. The region may or may not retain some of these national assets to form a military region artillery group (MRAG). It normally suballocates most artillery assets to subordinate districts for the formation of military district artillery groups (MDAGs) and/or division artillery groups (DAGs) and brigade artillery groups (BrAGs).

The General Staff may allocate an SSM brigade, or individual SSM battalions, from the national asset pool to a military region. However, these strategic assets always remain under General Staff control. The General Staff also controls a FROG rocket brigade or battalion allocated to a region conducting the main effort.

⁴ A region may suballocate these national-level antitank assets to subordinate military districts.

The national-level Air Defense Command may allocate some of its more mobile SAM units to a military region. These units may include regiments of low-to-medium-altitude SAMs (SA-6 or SA-8) or possibly portions of brigades of medium-to-high-altitude SAMs (SA-4 or SA-11).

⁶ A region may receive a reconnaissance and EC battalion from the Directorate of Military Intelligence. Although the region can retain this battalion under its own control, it can also allocate the battalion to support a subordinate military district.

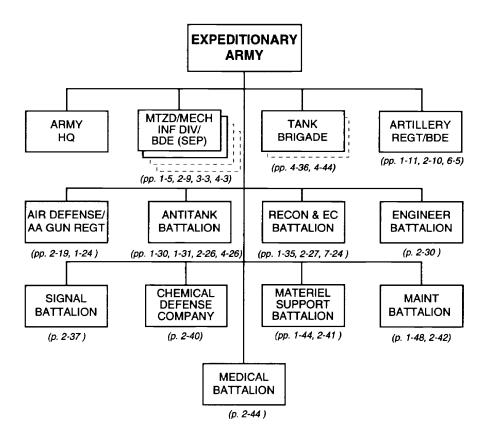

Most regions have an organic engineer battalion or company. These units are primarily combat engineers. Regions must rely on national assets for specialized engineer support such as pontoon bridge and assault crossing battalions. A high-priority region may receive an engineer brigade (p. 6-26) from the national asset pool. In that case, the region would retain the specialized engineer battalions at region level and suballocate the combat engineer battalion(s) to subordinate districts or divisions.

Most regions have organic signal organizations. In wartime, a region without signal organizations normally receives a signal battalion from the national asset pool.

⁹ A region logistics base normally includes one or more maintenance brigades from the national asset pool in wartime.

Expeditionary Army

The OPFOR is capable of fielding one expeditionary army, composed of mobile divisions and/or brigades, for conducting large-scale extraterritorial offensive operations. An expeditionary army is a joint command and is the integration point for ground, air, naval, and special operations forces. The commander of the region in which the army forms becomes the army commander. The region headquarters becomes the army headquarters.

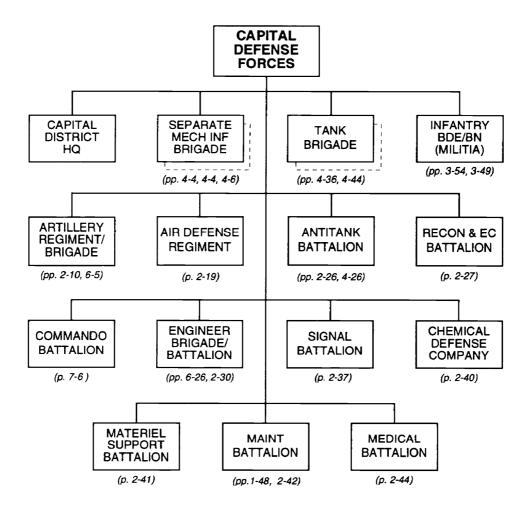

NOTES:

- 1. The army may comprise three to five mobile divisions, which come from three basic sources: standing divisions, divisions formed using restructured separate mechanized or motorized infantry brigades as a maneuver base, and divisions mobilized from the reserves. Standing divisions may come from within the region's subordinate districts or from another region at the direction of the General Staff/Ground Forces Headquarters. Districts composed of separate brigades may restructure them as divisional brigades, then receive division-level assets from the national asset pool, through the controlling region. Units composing a reserve division mobilize from within the region's subordinate districts.
- 2. The army could include separate mechanized or motorized infantry brigades or tank brigades directly subordinate to the army commander. These brigades could come from a subordinate district's forces, from another region at the direction of the General Staff/Ground Forces Headquarters, or from mobilized reserves. An organization consisting primarily of brigades, with no more than one division, may bear the designation *corps* rather than army.
- 3. Most of the army-level combat support and combat service support assets come from the national asset pool. The General Staff/Ground Forces Headquarters uses these assets to tailor the army for its special offensive mission.

Capital Defense Forces (Example)

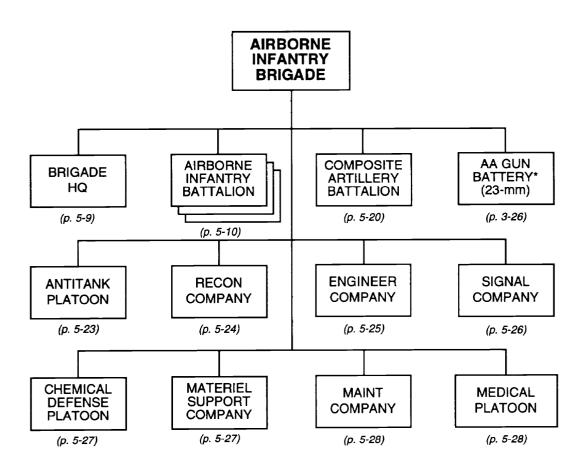

The Capital Defense Forces (CDF), garrisoned in the Capital District, are typically the best-equipped in the country. Their primary mission is to defend the State's national capital. However, they also serve as a strategic reserve. Composition of these forces is *subject to change*, depending on conditions and plans. Therefore, the following organization chart is merely an *example* of possible forces. In this example, the maneuver brigades in dashed boxes could serve as the strategic reserve, while the other units defend the capital.

NOTES:

- 1. Since the inception of the CDF, their composition has changed several times. At times, the Capital District has included a standing mechanized infantry division. However, the most common structure has been a specially tailored force composed of separate brigades (as shown above). Depending on the number of brigades, such a force can be more robust than a standard division. It also has greater flexibility and mobility.
- 2. Whether based on a division or separate brigades, the CDF normally have a full complement of combat support and combat service support assets resembling that shown above.

The Ground Forces may include an airborne infantry brigade. The General Staff/Ground Forces Headquarters holds this brigade as a strategic asset. It may employ the brigade, or one or two airborne infantry battalions from it, to support an operation conducted by a military region or an expeditionary army. However, it never allocates this brigade to them in the same manner that it does with other forces.

FOOTNOTE: * An airborne infantry brigade may not always have this battery of 23-mm AA guns. However, it always has some type of battery-sized air defense unit. It can have a battery of 14.5-mm AA heavy machineguns (p. 2-5) or a battery of three shoulder-fired SAM platoons (p. 5-15). It can also have any mix of three platoons from those three types of air defense units.

Chapter 6 National Asset Pool

The Ground Forces have a national asset pool with a variety of combat support and combat service support units. Chapters 1, 2, and 5 showed how units allocated from this pool can augment forces already organic to a division, military district, or military region. This chapter provides more detail on the various types of units that may be available for allocation from the national asset pool.

National Asset Pool, Ground Forces

The national asset pool is actually a pool of Ground Forces assets. It contains no maneuver forces but rather a variety of *combat support* and *combat service support* assets. Centralization of these assets at the national level allows the General Staff/Ground Forces Headquarters to tailor support to subordinate military regions based on specific missions and the perceived threat. It can allocate or reallocate these assets as the situation requires.

Military regions are the primary recipients of these assets. The region may retain them under its own control. However, it can also allocate some or all of them to subordinate military districts to form district- or division-level support organizations. The General Staff/Ground Forces Headquarters also has the option of allocating to one region sufficient assets to form an expeditionary army. The number of assets allocated depends on the mission and the forces already garrisoned in the region.

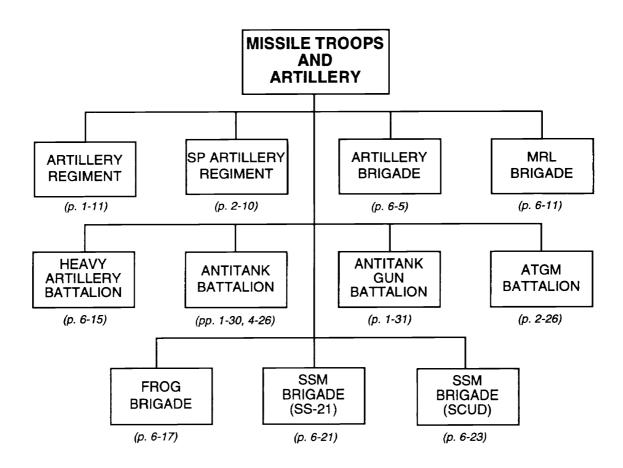

The national asset pool has **no fixed structure.** The number and types of units can vary widely, depending on the situation. Therefore, the following organization chart merely outlines the types of units that may be able available for allocation.

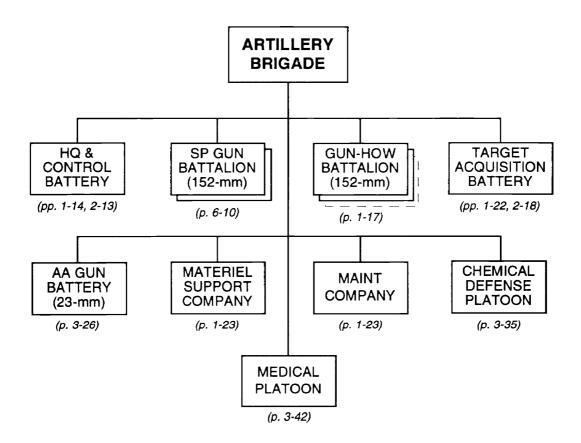

NOTE: A military region normally receives no more than one of any brigade- or regiment-sized unit type from the national asset pool. However, a region may receive more than one of some battalion-sized units.

Missile Troops and Artillery, National

The Chief of Missile Troops and Artillery in the General Staff/Ground Forces Headquarters controls several units. The numbers and types of units at this level can vary widely, depending on the size and structure of the Ground Forces they support. The following organization chart represents the *types* of artillery, rocket, and missile units that may be available.

NOTE: The General Staff/Ground Forces Headquarters may allocate an entire regiment or brigade to support a military region or an army. However, it may also allocate these assets as individual battalions.

NOTES:

- 1. An artillery brigade has either five 18-tube battalions (p. 6-6) or four 24-tube battalions (6-8).
- 2. The organization chart above shows the most common brigade structure. However, other combinations of gun and gun-howitzer battalions are possible. Some brigades may consist entirely of the 152-mm SP gun, 2S5 for both variants.
- 3. Instead of SP gun battalions, some brigades may have gun battalions equipped with the towed 152-mm field gun, 2A36. Some gun battalions may still have the older 130-mm field gun, M-46.
- 4. Structures of either four or five battalions may bear the designation artillery *regiment* (rather than brigade).
- 5. Equipment totals below for the headquarters and control battery and target acquisition battery reflect types and quantities associated primarily with towed systems (pp. 1-14 and 1-22). If the brigade has mostly SP gun battalions, these units are more likely to have the equipment types and quantities associated with SP systems (pp. 2-13 and 2-18).

NOTES:

- 1. An SSM battalion may consist of either two or three firing batteries. Therefore, a battalion may have 4 or 6 TELs, and a brigade may have 12 or 18 TELs. There is at least one reload per TEL.
- 2. The General Staff/Ground Forces Headquarters may deploy individual SSM battalions rather than entire brigades. If fielded in this manner, the battalion always has three batteries.

The Chief of Engineers in the General Staff/Ground Forces Headquarters controls several engineer units. The numbers and types of units at this level can vary widely, depending on the size and structure of the Ground Forces they support. The following organization chart represents the *types* of engineer units that may be available.

NOTE: The General Staff/Ground Forces Headquarters may allocate an entire regiment or brigade to support a military region or army. However, it may also allocate these assets as individual battalions.

NOTE: Some engineer brigades may have a second pontoon bridge battalion. However, the equipment totals here include only one such battalion.

FOOTNOTES:

^{*} When the armored tracked minelayer GMZ replaces the towed PMR, the unit need fewer trucks but has more VHF, vehicle mount, medium-power radios.

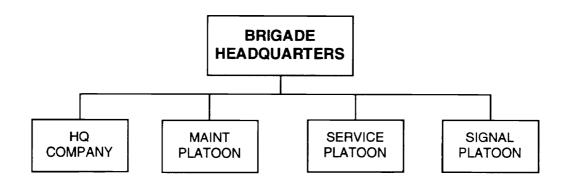

^{**} The PMM-2 amphibious bridge/ferry system may replace the PMP pontoon bridge. With the PMM-2, there is no need for powerboats.

^{***} With the GSP, 12 half-ferries form 6 ferries; with the PMM-2, there is only one vehicle per ferry.

Signal Troops, National

The Chief of Signal Troops in the General Staff/Ground Forces Headquarters controls several signal units. The numbers and types of units at this level can vary widely, depending on the size and structure of the Ground Forces they support. The following organization chart represents the *types* of signal units that may be available.

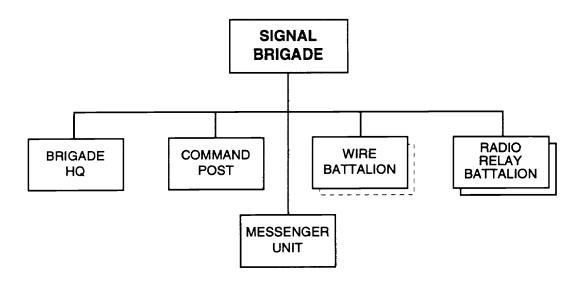

NOTE: The General Staff/Ground Forces Headquarters may allocate an entire regiment or brigade to support a military region or army. However, it may also allocate these assets as individual battalions.

NOTE: Some signal regiments may have the structure shown above. However, most have three signal battalions identical to those organic to divisions and districts (p. 2-37). This facilitates support to tactical units.

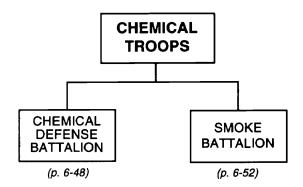

Signal Brigade, National

NOTE: Some signal brigades may have the structure shown above. However, most have three to four signal battalions identical to those organic to divisions and districts (p. 2-37). This facilitates support to tactical units.

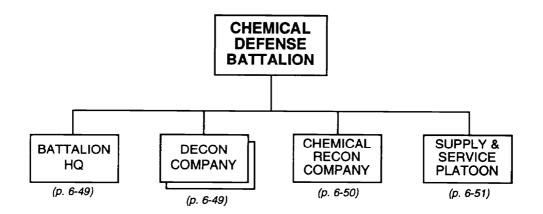

Chemical Troops, National

The Chief of Chemical Troops in the General Staff/Ground Forces Headquarters controls several chemical defense and smoke units. The numbers and types of units at this level can vary widely, depending on the size and structure of the Ground Forces they support. The following organization chart represents the *types* of chemical defense and smoke units that may be available.

NOTE: The Staff/Ground Forces Headquarters may allocate an entire battalion to support a military region or army. However, it may also allocate these assets as individual companies.

The Chief of Logistics in the General Staff/Ground Forces Headquarters controls several units and facilities. The numbers and types of these can vary widely, depending on the size and structure of the Ground Forces they support. The following organization chart represents the types of logistics units and facilities that may be available.

NOTE: The General Staff/Ground Forces Headquarters may allocate an entire materiel support or maintenance brigade to a military region or army. However, it may also allocate these assets as individual battalions.

Materiel Support Brigade, MR or National

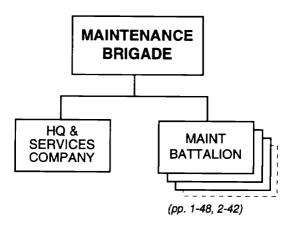

NOTES:

- 1. Materiel support brigades may have the structure shown above. The General Staff/Ground Forces Headquarters may retain such brigades at the national level, or allocate them to support a military region or an expeditionary army. This brigade structure facilitates centralized materiel support functions at the national or operational level.
- 2. Some materiel support brigades may consist of four or five materiel support battalions identical to those organic to divisions and districts (pp. 1-44 and 2-41). This configuration facilitates splitting the brigade's assets to support tactical units.

FOOTNOTE: * When the mission dictates, a materiel support brigade may have a tank transport/heavy lift company or battalion. A company can move the armored vehicles of a mechanized infantry or tank battalion. An entire battalion can move the armored vehicles of a mechanized infantry or tank brigade.

Maintenance Brigade, MR or National

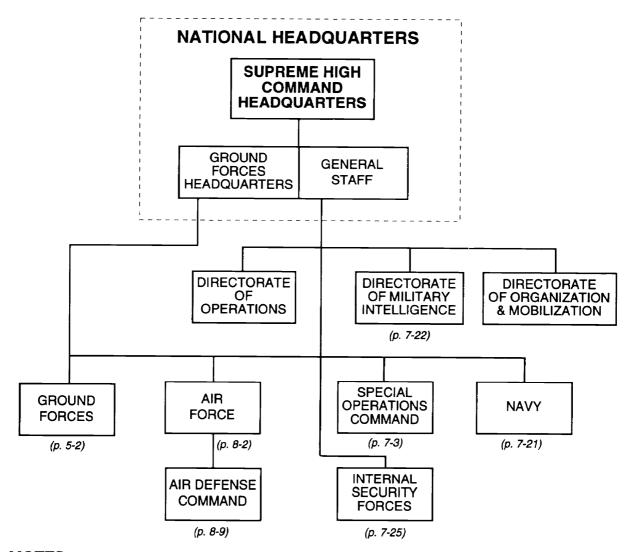

NOTE: Maintenance brigades have three or four maintenance battalions identical to those found in divisions and districts (pp. 1-48 and 2-42).

Chapter 7 National Military Structure

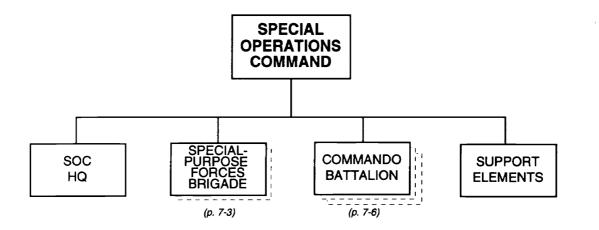

The OPFOR National Headquarters actually comprises three headquarters in one. It includes the Supreme High Command Headquarters and its executive agency, the General Staff. Since the Ground Forces are by far the largest branch of the armed forces, the National Headquarters also doubles as the Ground Forces Headquarters. Of the four branches, only the Ground Forces and the Air Force are large enough to warrant separate chapters. (Chapters 1 through 5 cover the Ground Forces, and Chapter 8 the Air Force.) This chapter provides some detail on the other two branches: the Special Operations Command and the Navy. It also covers the General Staffs Directorate of Military Intelligence and the Internal Security Forces of the Ministry of the Interior, which come under control of the General Staff in wartime.

CONTENTS

National Headquarters	7-2
Special Operations Command	7-3
Special-Purpose Forces Brigade, SOC	7-3
Special-Purpose Forces Battalion, SPF Bde	7-4
Special-Purpose Forces Team, SPF Co	7-5
Commando Battalion, SOC or MD or CDF	7-6

Troop Transport Platoon, Commando Bn	
Navy	7-21
Directorate of Military Intelligence, General Staff	
Signals Reconnaissance Battalion, DMI	
Reconnaissance and Electronic Combat Battalion, DMI	7-24
Internal Security Forces	7-25

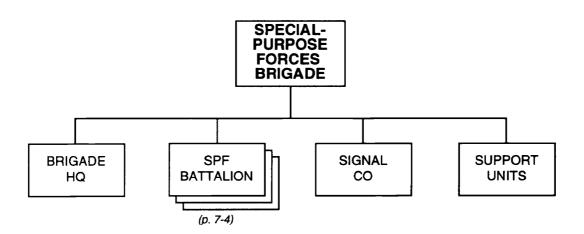

- 1. The OPFOR National Headquarters also serves as Ground Forces Headquarters. Since the Ground Forces comprise by far the largest branch of the armed forces, its officers dominate the National Headquarters. The President of the State Government holds the title of Supreme High Commander of Forces. However, the primary military authority in the Supreme High Command Headquarters is the Commander of the Armed Forces. He is the most senior Ground Forces general officer and also serves in the President's cabinet as Minister of Defense.
- 2. The General Staff is the executive agency for the Supreme High Command. A first deputy minister of defense, also a Ground Forces general, is the Chairman of the General Staff. The General Staff consists predominantly of Ground Forces personnel, many of whom also hold positions in the Ground Forces Headquarters. Representatives of other branches primarily advise on how those branches can provide support to the Ground Forces. The General Staff controls all branches of the armed forces, as well as national-level intelligence assets and internal security forces.

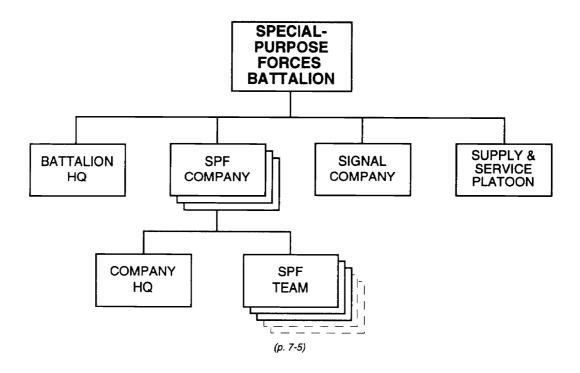

NOTE: There is no fixed number of special-purpose forces (SPF) brigades and commando battalions. Normally, the command has one SPF brigade. The number of commando battalions located at the national level depends on how many have been subordinated to military districts.

Special-Purpose Forces Brigade, SOC

- 1. The brigade structure is not fixed. This chart represents what may be the organization of a typical brigade.
- 2. A brigade may deploy about 27 to 45 SPF teams.

- 1. The battalion structure is not fixed.
- 2. The total number of teams an SPF battalion can deploy varies from 9 to 15.

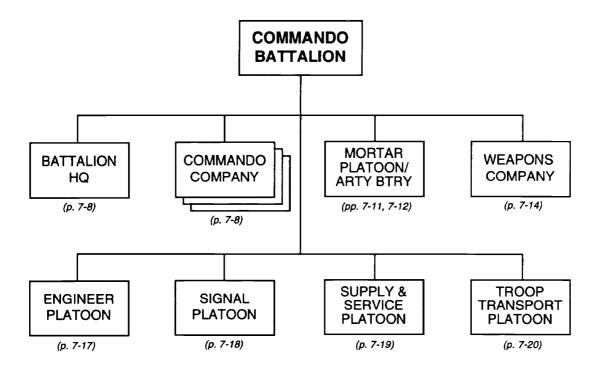

SPECIAL-PURPOSE FORCES TEAM

Team Leader (Officer)	AKS-74 or AKSU-74, PM
Asst Team Leader (WO or Senior NCO)	
1-2x Communications Specialist	Radio, AKS-74 or AKSU-74, PM
1-2x Weapons Specialist	RPG-16D, PM
1-2x Demolitions Specialist	
0-4x Recon Specialist	

PRINCIPAL ITEMS OF EQUIPMENT

Equipment To	<u>otal</u>	Equipment	Total
9-mm Pistol, PM 5	5-12	40-mm Under-Barrel Grenade Launche	r,
5.45-mm Assault Rifle, AKS-74 or		BG-15	2-5
5.45-mm Submachinegun,		ATGL, RPG-16D	1-2
AKSU-74 4	l-10	Night-Vision Goggles	1
7.62-mm Sniper Rifle, SVD	1	Night-Vision Sight (Small Arms)	2-5
		Radio, Burst-Transmission	1-2

- 1. Team composition is not fixed. The organization above shows the variations that may exist within what may be a typical SPF team.
- 2. In keeping with its behind-the-lines missions, the SPF team is lightly equipped. Each soldier normally has an assault rifle, a silenced pistol, a knife, and up to eight hand grenades of various types. In addition, the team's equipment normally includes an SVD sniper rifle, directional mines, explosives, and night-vision devices. The team can also receive shoulder-fired SAMs, manpack ATGMs, or RPO flamethrowers. Equipment may vary with the mission.
- 3. At least one team member has received training as a medic.

NOTES:

- 1. Commando battalions are organic to the Special Operations Command and the betterequipped districts, including the Capital Defense Forces. These battalions have special training in counterinsurgency. Their role in conventional operations is to provide special reconnaissance and direct action behind enemy lines.
- 2. Some commando battalions may have an entire artillery battery (p. 7-12) rather than the single mortar platoon (p. 7-11) reflected in the equipment totals above.

NOTE: One or two trucks in each troop transport section may carry a 12.7-mm heavy machinegun or a 30-mm automatic grenade launcher. These weapons provide a minimum of fire support for the unit during movement by vehicle.

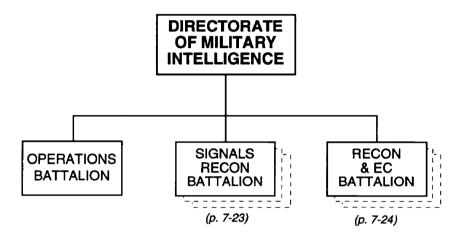

Navy _____

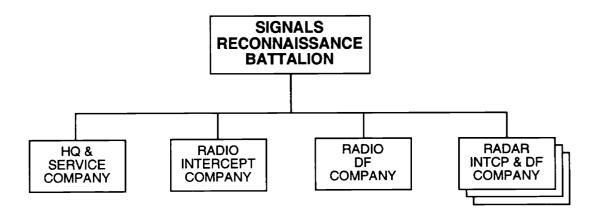

- 1. As with the Air Force, size and type of naval units depends on the size of the Ground Forces they support and the number and types of specialized missions they must conduct such as the number of amphibious support squadrons needed for special operations support.
- 2. Squadrons may be regionally affiliated, as with air defense units. For example, a region may have a missile attack boat squadron and patrol torpedo boat squadron stationed in one of the region's ports.
- 3. The upper line of the organization chart represents the baseline, even for a "brown water" force. A more capable navy would include organizations on the lower line.

Directorate of Military Intelligence, General Staff

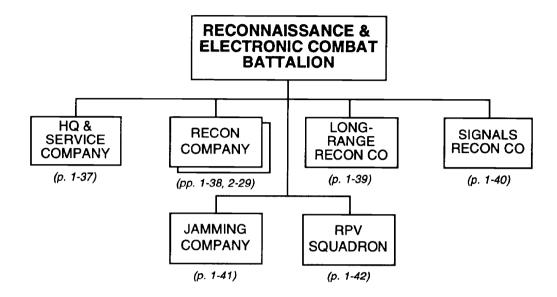

Of the three primary directorates of the General Staff, the Directorate of Military Intelligence (DMI) plays a special role. It controls national-level intelligence assets and may allocate some of its forces to support Ground Forces organizations. The organization chart below represents only the portion of its assets which the DMI could allocate downward. It does not represent or define the intricate relationships among national-level structures and agencies.

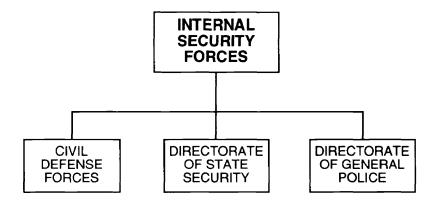

- 1. The directorate has only one operations battalion. This battalion always remains under DMI control. Its exact composition and equipment strength may vary. Functions of the battalion include special information (propaganda), counterintelligence (both overt and covert collection), and interrogation. Elements from each of these disciplines normally form tailored platoon- and company-sized teams. The DMI can allocate such teams to regions and districts based on their specific needs. Counterintelligence and interrogation assets are the most likely candidates for allocation.
- 2. Signals reconnaissance battalions normally remain under the control of the General Staff. However, the General Staff/Ground Forces Headquarters may allocate them to the regions or to an expeditionary army.
- 3. Reconnaissance and electronic combat (EC) battalions are similar to those organic to districts and divisions. However, the battalions belonging to the DMI are more likely to have a remotely-piloted vehicle squadron. The General Staff/Ground Forces Headquarters can allocate these battalions to military regions and their subordinate districts (particularly to those preparing for division- or army-level offensive actions).

- 1. Another possible name for this battalion is radio and radar intercept and direction-finding battalion.
- 2. Exact composition and equipment strengths vary. However, equipment types are basically of the tactical support variety, as shown in the reconnaissance and EC battalions (pp. 1-35 and 2-27).
- 3. The General Staff/Ground Forces Headquarters may allocate these battalions as a whole to support a region or army. It can also allocate individual companies to support specific district or region operations. The latter case is more probable when the organization requesting support has sufficient ground reconnaissance assets, but lacks the electronic combat capabilities of the reconnaissance and EC battalion.

- 1. The General Staff normally allocates a reconnaissance and EC battalion, as a whole, to support a military region or expeditionary army. The region or army, in turn, may attach such a battalion to a subordinate military district or division that lacks an organic reconnaissance and EC battalion.
- 2. For a listing of the principal items of equipment for this battalion, see pp. 1-36 and 2-28.

NOTES.

- 1. During peacetime, the Ministry of the Interior (MININT) is responsible for internal security and all related functions. During wartime, however, the MININT's Internal Security Forces become subordinate to the Supreme High Command. The General Staff controls and supervises their activities.
- 2. Civil Defense Forces comprise a variety of nonmilitary units. The collective mission of these forces is to protect the population and economic centers against the effects of all types of natural disaster and warfare. The General Staff divides areas of responsibility into defense zones that correspond to military region and/or district boundaries. In peacetime, normal missions include emergency engineering, rescue, and similar disaster relief functions. During wartime, rear area security is their primary mission. Units have no standard structure; groupings vary according to each units' function. These functions range from repair and salvage, to fighting fires, to rendering first aid.
- 3. The Directorate of State Security is responsible for preventing counterrevolutionary activities, investigating these activities, and prosecuting the perpetrators. During times of crisis and wartime, the Directorate is also responsible for finding and neutralizing dissidents and spies. Elements of the Directorate deploy throughout the country, normally collocating with a military region/district headquarters.
- 4. The Directorate of General Police has responsibility for national and local police, fire protection, and the penal system.

Chapter 8 Air Force and Air Defense Command

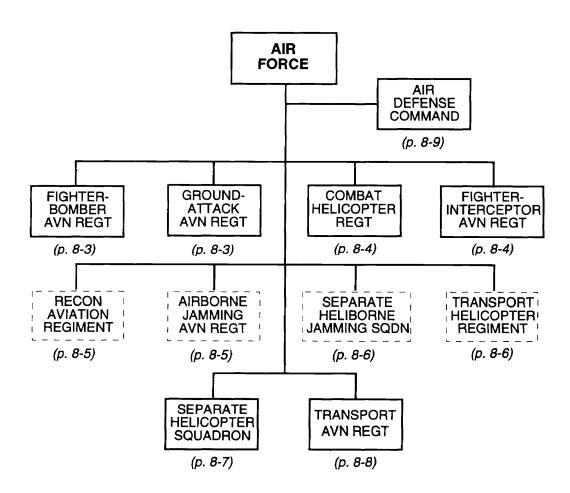

Among the four branches of the OPFOR armed forces, the Air Force is the second largest, after the Ground Forces. It includes the Air Defense Command. The numbers and types of aviation and air defense units correspond to the size of the Ground Forces they support.

Missile Firing Battery, SAM Regt (SA-6)	8-35

Air Force

The OPFOR Air Force, including the Air Defense Command, is second only to the Ground Forces in size. Its size and composition depend on the size of the Ground Forces it supports and the number and types of aircraft required for specialized missions. Such missions can include support to airborne forces or the Special Operations Command. The organization chart below does not depict a fixed structure. Rather, it depicts the various *types* of regiments and squadrons that could be present in the Air Force structure.

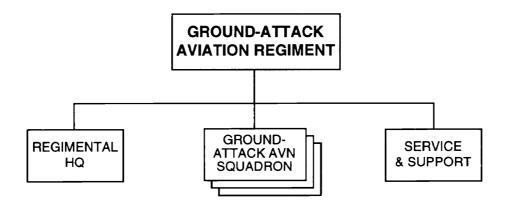

NOTE: Air Force units with *aviation* in their name generally consist of fixed-wing aircraft.

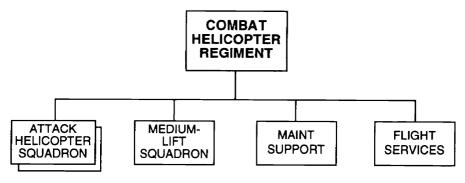

NOTE: This regiment normally contains pure squadrons of the MiG- 17/FRESC0, MiG-19/FARMER, 27/FLOGGER D/J, and/or Su-24/FENCER A/C fighter-bomber aircraft. If equipped with Su-24/FENCER aircraft, this regiment may be called a bomber aviation regiment. Each squadron normally has 12 aircraft. This total includes up to 2 training aircraft per squadron that can also serve as combat aircraft.

Ground-Attack Aviation Regiment, Air Force _____

NOTE: This regiment normally contains pure squadrons of the MiG-17/FRESCO, MiG-19/FARMER, Su-7B/FITTER A, Su-17/FITTER C/D/H, and/or the Su-24 FENCER A/C ground-attack aircraft. Each squadron normally has 12 aircraft. This total includes up to 2 training aircraft per squadron that can also serve as combat aircraft. A more modernized Air Force could have at least one squadron of Su-25/FROGFOOT ground-attack aircraft, plus 2 Su-25UB trainers.

Combat Helicopter Regiment, Air Force

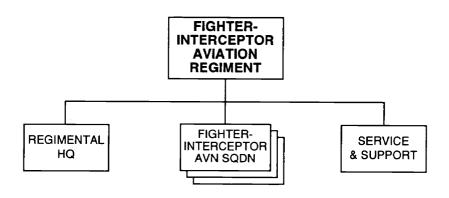

PRINCIPAL ITEMS OF EQUIPMENT

Equipment	<u>Total</u>	Equipment	<u>Total</u>
Attack Helicopter,		Medium Helicopter, Mi-8T/HIP C	
Mi-24(Mi-25)/HIND/D/E/F	. 30-40	Mi-8MT(Mi-17)/HIP H	15-20

NOTES:

- 1. Some combat helicopter regiments also include six Mi-24R/HIND G 1 NBC-sampling helicopters and six Mi-24K/HIND G2 photoreconnaissance helicopters.
- 2. Standard squadron strength is either 15 or 20 aircraft.
- 3. Some combat helicopter regiments have two squadrons of Mi-2/HOPLITE instead of the Mi-24(Mi-25)/HIND. One or both of these squadrons could have HOPLITEs configured as lightly armed helicopters. If so, these variants can carry a variety of armaments.

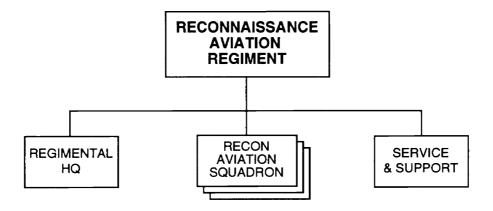

Fighter-Interceptor Aviation Regiment, Air Force

NOTE: This regiment normally contains pure squadrons of the Mig-17/FRESCO, MiG-19/FARMER, MiG-2/FISHBED J, MiG-23/FLOGGER B/E/G, and/or Su-27/FLANKER B fighter-interceptor aircraft. A more modernized Air Force could have one squadron of MiG-29/FULCRUM. Each squadron normally has 12 aircraft. This total includes up to 2 training aircraft per squadron that can also serve as combat aircraft.

Reconnaissance Aviation Regiment,

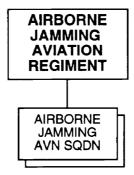

Air Force__

NOTES:

- 1. The reconnaissance aviation squadrons of this regiment may have reconnaissance variants of the following aircraft: Su-24/FENCER, Su-17/FITTER, or MiG-25/FOXBAT B/D. Each squadron normally has 16 aircraft. This total includes up to 4 training aircraft per squadron that can also perform reconnaissance.
- 2. This type of specialized regiment appears only in larger Air Force structures.

Airborne Jamming Aviation Regiment, Air Force_

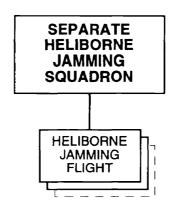

NOTES:

- 1. This regiment may have a squadron of Su-24/FENCER jamming variants and a squadron of Yak-28/BREWER E jamming variants. Each squadron normally has 12 aircraft.
- 2. This regiment appears only in larger Air Force structures.

Separate Heliborne Jamming Squadron,

AIR Force_

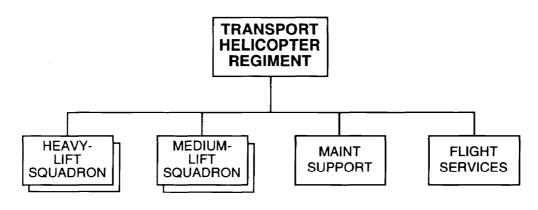

NOTES:

- 1. This squadron may have one or two Mi-8T/HIP C medium helicopters and 14 to 21 jamming variants of the types Mi-8PPA (HIP J) and Mi-8SMV (HIP K).
- 2. This type of specialized squadron appears only in larger Air Force structures and/or structures heavier in rotary-wing aircraft.

Transport Helicopter Regiment,

Air Force

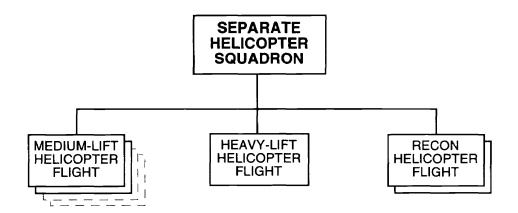

PRINCIPAL ITEMS OF EQUIPMENT

Equipment	<u>Total</u>	Equipment	<u>Total</u>
Heavy-Lift Helicopter, Mi-6A/HOO	K or	Medium Helicopter, Mi-8T/HIP C or	
Mi-26/HALO A	24	Mi-8MT(Mi-17)/HIP H	24

NOTES:

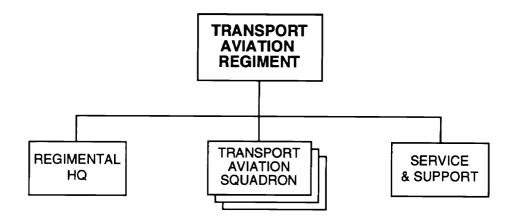

- 1. Some of the medium helicopters may be Mi-8S VIP variants or Mi-8VKP airborne command post variants.
- 2. Although uncommon, some regiments have substituted a light helicopter squadron for one of the medium-lift squadrons, using the Mi-2iHOPLITE.

Equipment	<u>Total</u>	Equipment	<u>Total</u>
Medium Helicopter, Mi-8T/HIP C/	E or	NBC-Sampling Helicopter,	
Mi-8MT(Mi-17)/HIP H	6-12	Mi-24R/HIND G1	2
Heavy-Lift Helicopter, Mi-6A/HOC)K	Photorecon Helicopter,	
or Mi-26/HALO A	1-2	Mi-24K/HIND G2	2

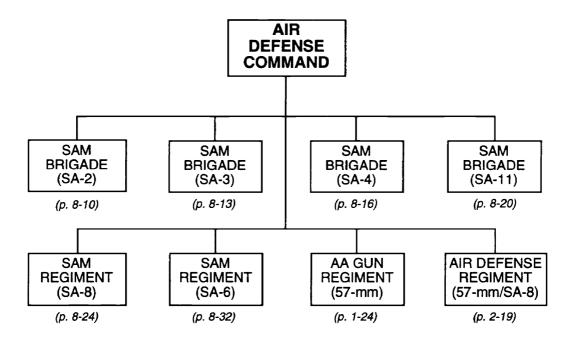

NOTES:

- 1. Some separate helicopter squadrons may also have two or three Mi-8SMV or Mi-8PPA jam-Ming helicopters. Some squadrons may also have one or two Mi-8VKP airborne command post helicopters.
- 2. Some Air Force structures have a separate mixed aviation squadron with helicopter assets similar to those of a separate helicopter squadron (less the reconnaissance and jamming helicopters), plus 12 to 24 light-to-medium fixed-wing transport aircraft.
- 3. A smaller Air Force may have its rotary-wing aircraft organized solely in this manner, rather than the regimental structure predominant in larger forces.

NOTE: This regiment normally contains pure squadrons of the An-2/COLT light transport, 11-18/COOT, and An-26/CURL light transport aircraft. Each squadron has either 16 or 20 aircraft. Some regiments have a squadron of An-12/CUB medium transports, which also have an electronic combat or reconnaissance configuration.

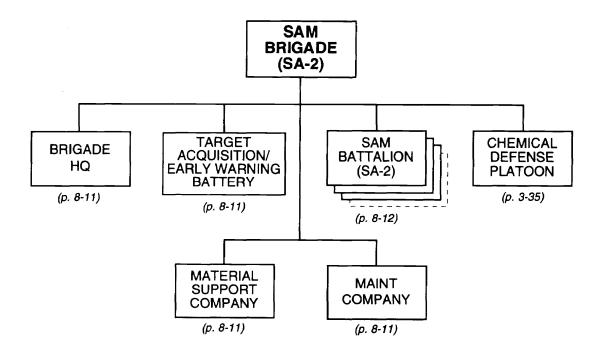

The Air Defense Command (ADC) contains brigades and regiments of either surface-to-air missiles (SAMs) or antiaircraft (AA) guns. Maintaining single-system units allows the ADC to manage limited assets, tailoring support to a particular region or air defense zone. The following organization chart represents the *types* of air defense units that may be available to the ADC. The number of each type can vary.

NOTES:

- 1. Numbers and types of air defense regiments and brigades depend on the number and importance of air defense zones/regions they have to defend. Assets may have a habitual regional affiliation, or the General Staff/National Headquarters may tailor support as mission dictates.
- 2. In addition, the ADC may have an air defense jamming battalion or perhaps an air defense jamming regiment with up to three such battalions. Each battalion can have up to 54 air defense jammers, along with supporting target acquisition systems.

FOOTNOTE: * This air defense regiment with a mix of AA gun and SAM battalions is an exception to the norm of single-system units. This regiment is particularly suited for allocation to a high-priority region or district. This allocation could support the mobilization of an expeditionary army or a mechanized infantry division.

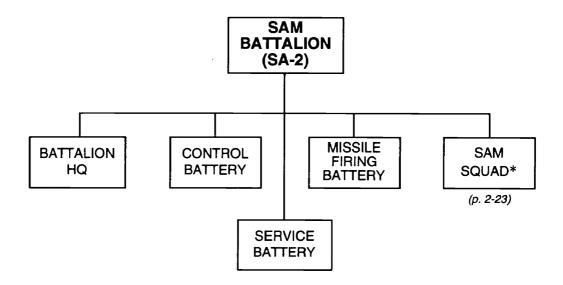

NOTES:

- 1. This SAM brigade may have three or four SAM battalions. The three-battalion organization may bear the designation of regiment, rather than brigade. Equipment totals below are for the three-battalion version.
- 2. SA-2 battalions could combine with other SAM/AA gun units to provide specialized support to a specific region or district.

FOOTNOTE: * Instead of this SAM squad, some battalions may have an AA gun section with two 23-mm AA guns, ZU-23. Other battalions may have a battery of six 14.5-mm AA heavy machineguns (p. 2-5). Because of this, the numbers of trucks and radios may also vary.

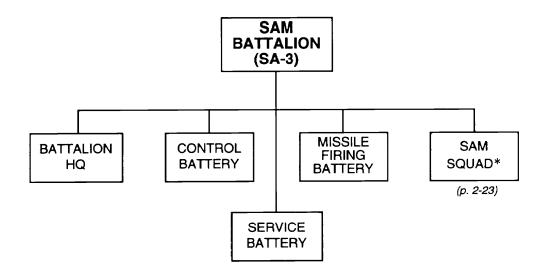

NOTES:

- 1. This SAM brigade may have three or four SAM battalions. Either the three- or four-battalion organization may bear the designation of regiment, rather than brigade. Depending on the area requiring air defense coverage, an SA-3 brigade could have as many as six battalions. Equipment totals below are for the four-battalion version.
- 2. SA-3 battalions could combine with other SAM/AA gun units to provide specialized support to a specific region or district.

Appendix A Maneuver and Fire Support Equipment Substitution Matrices

The matrices in this appendix illustrate some of the different equipment options available to scenario and order of battle developers. Although this organization guide provides a baseline of widely-used systems produced in the former Soviet Union (FSU), the intent of the capabilities-based OPFOR is to allow users to tailor their orders of battle by substituting other worldwide systems. Deviations from the baseline systems should relate to specific training objectives. For example, users may desk to mirror the actual mix of equipment found in a particular region or to introduce a particular weapons capability or vulnerability.

The matrixes list most of the major **baseline** systems in the organization guide and provide a number of potential substitutes for each. While the lists of **potential substitutes** are not all-inclusive, they contain most common systems that have roughly **comparable** capabilities. They also contain some **alternative** systems that may perform the same missions (with greater or lesser capability) or have different capabilities for special uses. Entries may include system name, caliber of main armament, vehicle mount (for self-propelled systems), and digraph for country of origin. Entries within the alternative category also include one of the following symbols identifying each system's capabilities in relation to the baseline:

- (+) More capable.
- (-) Less capable.
- (*) Different capabilities for special uses.

Users substituting systems from the matrices or considering other foreign weapons systems for use in an OPFOR order of battle should evaluate candidate substitutes against the following criteria

- **Is the system available to potential adversaries?** To satisfy this criterion, the system should be in service with the armed forces of countries traditionally hostile to the United States or widely exported on the world market.
- Does the system exist in large enough quantities to justify training against it? At a minimum, total system production should at least equal the numbers contained in a proposed order of battle. Moreover, US military units using currently available equipment generally should not train against foreign developmental systems that have not reached initial operational capability (IOC).
- Does the mix and variety of systems in an order of battle conform to some logical pattern? Some users constructing a large order of battle may want to pattern the mix of system types and generations on some actual country. Others may wish to standardize systems throughout the order of battle for simplicity or ease in modeling. In any case, the systems portrayed generally should be in unit sets of regimental or battalion size. Because of the logistics and training challenges involved in supporting a weapon system, users should avoid excessive variety.

Users should keep in mind that substitutions for major weapons systems may also affect the types and numbers of supporting systems.

Appendix B Engineer Equipment Substitution Matrices

The matrices contained in this appendix illustrate some of the different equipment options available to scenario and order of battle developers. Although this organization guide provides a baseline of widely-used systems produced in the former Soviet Union (FSU), the intent of the capabilities-based OPFOR is to allow users to tailor their orders of battle by substituting other worldwide systems. Deviations from the baseline systems should relate to specific training objectives. For example, users may desire to mirror the actual mix of equipment found in a particular region or to introduce a particular capability or vulnerability.

The matrices list most of the major *baseline* engineer systems contained in the organization guide and provide a number of potential substitutes for each. While the lists of *potential substitutes* are not all-inclusive, they contain most common systems that have roughly *comparable* capabilities. They also contain some *alternative* systems that may perform the same missions (with greater or lesser capability) or have different capabilities for special uses. Entries include the system name and the digraph for country of origin. Entries within the alternative category also include one of the following symbols identifying each system's capabilities in relation to the baseline:

- (+) More capable.
- (-) Less capable.
- (*) Different capabilities for special uses.

Users substituting systems from the matrices or considering other foreign weapons systems for use in an OPFOR order of battle should evaluate candidate substitutes against the same basic criteria as in Appendix A.

FM 100-63

Amphibious Transporter and Ferry Substitution Matrix _____

D 11 G	Potential Substitutes	
Baseline Systems	Comparable	Alternative
GSP Ferry (RS)	None	PMM-2 (RS)(+)
		M-2/-3 (GM)(+)
		PFM (FR)(+)
		BAC Automone 40/60 (FR)(+)
		2TFR (IS)(+)
		Type-70 (JA)(+)
		Mobile Assault Bridge (US)(-)
PTS Amphibious	PTS-M (RS)	BAV 485 (RS)(-)
Transporter (RS)	PTS-2 (RS)	K-61 (RS)(-)
		LARC (US)(-)

NOTE: The greatest discriminator in capability here is whether the system could be autonomous or requires assembly with other sections.

Danilina Caratana	Potential Substitutes		
Baseline Systems	Comparable	Alternative	
TMM Truck-Launched Bridge (RS)	Truck-Mounted Scissors Treadway Bridge (SR) AM-50 (CZ) GQL-110/Type-84 (CH)	Bundeswehr (FSB)(+) KMM (RS)(-) Type-81 (JA)(+) SMT-1 (PL)(-) Type 69 (CH)(-)	
MTU-20 Tank-Launched Bridge (RS)	M48/AVLB (US) MT-55 (CZ) BLG-60 (GM) Biber Bridgelayer (GM) Yugoslav Tank-Launched Bridge (SR) Type 84 (CH) Type-67 (JA)	MTU-72 (RS)(+) BLP-72 (GM)(+) AMX-30/13 (FR)(+) Pz-68 (SZ)(+) Chieftain AVLB (UK)(+)	

NOTE: The main discriminator in capability here is the chassis. More modern, faster-moving, more heavily armored chassis improve mobility and survivability factors. However, the bridge specifications are all similar.

(continued)

FM 100-63

Bridging Substitution Matrix (continued)

Potential Substitutes		
Comparable	Alternative	
Type 79 (CH)	None (All have fairly similar	
M-71 (SR)	capabilities.)	
Ribbon Bridge (US)		
PFM (FR)		
Folding Float Bridge (GM)		
DAF YGZ 2300 (NL)		
PR-60 (RO)		
PP-64 (PL)		
	Type 79 (CH) Type 74 (CH) M-71 (SR) Ribbon Bridge (US) PFM (FR) Folding Float Bridge (GM) DAF YGZ 2300 (NL) PR-60 (RO)	

NOTE: The main discriminator in capability here is the chassis. More modern, faster-moving, more heavily armored chassis improve mobility and survivability factors. However, the bridge specifications are all similar.

Ditching and Trenching Machine Substitution Matrix

Dagalina Systems	Potential Substitutes		
Baseline Systems	Comparable	Alternative	
MDK/MDK-2M/MDK-3M Ditcher (RS)	M1987 (CH)	None	
BMT/BMT-3/BMT-4	M1984 (CH)	TMK (RS)(-)	
Trencher (RS)		PZM (RS)(-)	
		Model 260 (CH)(-)	
		Type 74 (CH)(-)	
		SEE (US)(-)	
		Case & John Deer Backhoe/Loader (US)(-)	
		Matenin Trencher (FR)(-)	

NOTE:

- 1. For trenchers, the greatest discriminator in capability is chassis mobility. Only the BTM series and the M 1984 are tracked. The rest are all wheeled, which degrades mobility.
- 2. Unlike the other systems, the Case and John Deer systems do not have a rotary trencher but can still use a bucket or backhoe to make a trench, achieving the same results.

Appendix C Cargo Truck, Trailer, and Radio Substitution

This manual uses generic descriptors to indicate truck and trailer capacity and radiocapabilities. The following list, based on equipment produced in the former Soviet Union, provides a definition of terms and examples of equipment types in each generic category. However, users may substitute any comparable piece of equipment that falls within the range of capabilities for each system.

Trucks
